

Pursuant to O.R.C. §§ 3745.04 and/or 3745.07, Ashtabula County Water Watch, Barbara Gubanyar, Dr. T. Jo Gallo, Sarah Brower and Jay Brower (collectively, “Appellants”) hereby appeal to the Environmental Review Appeals Commission (the “Commission”), from the final issuance of Air Pollution Permit-to-Install Permit No. P0127678 (the “Permit”) by Laurie A. Stevenson (the “Director”) of the Ohio Environmental Protection Agency (“OEPA”), which authorizes construction of a merchant pig iron production facility (the “Facility”), with a final issuance date of July 17, 2020. A true and accurate copy of the final action is attached and marked as Exhibit “A.”

PROCEDURAL AND FACTUAL BACKGROUND

Parties and related entities

5. Ashtabula County Water Watch (“ACWW”) is a grassroots community membership organization based in Ashtabula, Ohio, having a mission of protecting the water quality and health of Ashtabula County residents and ecosystems. ACWW has members who live, work, travel, and recreate in, around, and downwind of the Facility’s vicinity. Appellants’ members will be aggrieved and adversely affected by the OEPA’s issuance of the Permit because the activities and emissions authorized by the Permit will increase the level of pollution in the air that is breathed by its members. In addition, the emissions from the Facility will adversely affect the use and enjoyment by ACWW members of Lake Erie, the Ashtabula River, and other natural, recreational, and residential areas in the vicinity of the Facility. ACWW’s membership will also be adversely affected by the Facility’s carbon dioxide emissions and other greenhouse gasses and the climate change to which such emissions will contribute.

6. Barbara Gubanyar is an individual living in Ashtabula, Ohio. Ms. Gubanyar is seventy-five years old, suffers from COPD and cardiovascular disease, and resides less than one mile from the proposed Facility. Ms. Gubanyar is an avid gardener, dog walker, and regularly swims in Lake Erie, and has a deep affinity for Ashtabula's local tourism economy, harbor restaurants, and natural beauty. She will be aggrieved and adversely affected by the OEPA's issuance of the Permit because the activities and emissions authorized by the Permit will adversely affect her use and enjoyment of the Lake, harbor, and her residence. Additionally, she will be aggrieved and personally affected by the increases in the levels of pollution in the air caused by the Facility, especially in light of her COPD and cardiovascular disease. Ms. Gubanyar will also be adversely affected by the Facility's carbon dioxide emissions and other greenhouse gasses and the climate change to which such emissions will contribute.

7. T Jo Gallo, DNP, RN, CNL, NP-C is an individual living in Ashtabula, Ohio. The site of the proposed Facility sits approximately 1500 feet immediately north of Dr. Gallo's backyard. Dr. Gallo will be aggrieved and adversely affected by the OEPA's issuance of the Permit because she will breathe increased air pollution caused by the Facility, and the increased air pollution caused by the Facility will affect the use and enjoyment of her residence. Dr. Gallo will also be adversely affected by the Facility's carbon dioxide emissions and other greenhouse gasses and the climate change to which such emissions will contribute. Additionally, as a health care provider, Dr. Gallo will, as a result of the activities and emissions authorized by the Permit, spend increased time interfacing with residents affected by air pollution.

8. Sarah Brower is an individual living in Ashtabula, Ohio. The site of the proposed Facility sits approximately 1500 feet immediately north of Ms. Brower's backyard. Ms. Brower will be aggrieved and adversely affected by the OEPA's issuance of the Permit because she will breathe

increased air pollution caused by the Facility, and the increased air pollution caused by the Facility will adversely affect the use and enjoyment of her residence. Ms. Brower will also be adversely affected by the Facility's carbon dioxide emissions and other greenhouse gasses and the climate change to which such emissions will contribute.

9. Jay Brower is an individual living in Ashtabula, Ohio. Mr. Brower is 68 years old, suffers from COPD, and lives less than one mile from the proposed Facility. Mr. Brower will be aggrieved and adversely affected by the OEPA's issuance of the Permit because the activities and emissions authorized by the Permit will adversely affect his use and enjoyment of his residence. Additionally, he will be aggrieved and personally affected by the increases in the levels of pollution in the air caused by the Facility, especially in light of his COPD. Mr. Brower will also be adversely affected by the Facility's carbon dioxide emissions and other greenhouse gasses and the climate change to which such emissions will contribute.

10. OEPA is a regulatory agency established under the laws of Ohio tasked with the administration and enforcement of certain State and Federal environmental protection statutes, including, *inter alia*, the Clean Air Act (the "Act"), *as amended* 42 U.S.C. §§ 7401 – 7671q. In particular, OEPA is tasked with administering the Act's New Source Review permitting programs. *See* 42 U.S.C. §§ 7470 – 7479; Ohio Adm. Code 3745-31-02. OEPA is also tasked with the administration and regulation of State-level air quality laws. *See* R.C. 3704.01 – 3704.99.

11. Petmin USA, Inc. ("Petmin") is a corporation organized under the laws of Ohio having a mailing address of 1003 Bridge Street, Ashtabula OH 44004, and is the applicant to which the Director issued the Permit. Petmin is a subsidiary of Petmin Ltd., a mineral extraction corporation headquartered in South Africa.

Factual and Procedural History

12. The Permit authorizes construction of a merchant pig iron plant in Ashtabula, Ohio. Specifically, the facility is located on the grounds of the Kinder Morgan Pinney Dock, immediately adjacent to Lake Erie. The facility has a physical address of 1149 East 5th Street, 44004.
13. Merchant pig iron is an intermediate product used in the production of steel, generated by the smelting of iron ore.
14. The Permit authorizes Petmin to construct fourteen “Emissions Units,” which contemplate emissions emanating from the following sources:
 - a. An Electric Arc Furnace;
 - b. A natural gas-fired startup boiler;
 - c. A natural gas and process gas-fired process gas heater
 - d. A diesel-fired black start generator;
 - e. A quenching and wastewater pretreatment area;
 - f. Two emergency fire pumps;
 - g. Two emergency generators;
 - h. Three natural gas fired ladle dryer/preheaters.
 - i. The handling of raw materials;
 - j. Unpaved roadways and parking areas;
15. Petmin initially applied for a permit to install for the Facility in 2018. The Director certified Petmin’s initial application as administratively complete on September 11, 2018. A draft permit was issued on November 14, 2018.

16. The Director issued Petmin a final Permit-to-Install having a permit number P0125024 (“initial permit”) on February 6, 2019.

17. This initial permit mandated construction of a standalone facility for the recapture of carbon dioxide (“CO₂”), designed to recover approximately 50 percent of the potential greenhouse gases from the proposed facility. The initial permit contemplated that Petmin or a partnering company would seek additional permit authorizations specifying design conditions of this CO₂ recapture facility, which would similarly be subject to the strictures of OEPA’s permitting review processes.

18. Neither Petmin nor any business partner thereof proceeded with an application for the CO₂ recapture facility or with construction of the Facility in accordance with its initial permit. Instead, on or around the fall of 2019, Petmin submitted a new application for a Permit-to-Install, contemplating substantial design changes to the Facility.

19. The Director recognized the new permit application as administratively complete on December 23, 2019. On April 2, 2020, the Director issued a draft permit for the Facility.

20. The final issuance of the Permit occurred on July 17, 2020.

21. The instantly appealed-from Permit does not mandate construction of the initially contemplated CO₂ recapture facility.

22. Additionally, the instantly appealed-from Permit establishes many emissions limits which are less restrictive than those in the initial permit-to-install. Examples include, without limitation, the new Permit:

- a. Failing to have any emission limits for Sulfur Dioxide (SO₂) or Volatile Organic Compounds (VOC) for the Facility’s natural gas-fired startup boiler;

- b. Failing to have any emission limit for VOC, and having less stringent emissions limits for SO₂ and Carbon Dioxide equivalent (CO₂) for the Facility's process gas heater;
- c. Failing to have any emissions limit for SO₂ for the Facility's black start generator;
- d. Failing to have any emission limit for VOC, and having less stringent emissions limits for Particulate Matter less than or equal to 10 microns in aerodynamic diameter (PM₁₀), Particulate Matter less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}), Nitrous Oxides (NO_x), and Carbon Dioxide Equivalent (CO₂e) for the Facility's Quenching and Wastewater pretreatment area;
- e. Failing to have any emission limits for SO₂ and VOC for the emergency generators;
- f. Failing to have any emission limit for VOC for the Facility's electric arc furnace.

23. In aggregate, as compared with Petmin's initial permit to install, the immediately-appealed from Permit authorizes an additional 56.68 tons per year of NO_x, an additional 37.40 tons per year of PM₁₀, and additional 42.90 tons per year of PM_{2.5}, an additional 1.87 tons per year of SO₂, an additional 2.52 tons per year of VOC, an additional 457.99 tons per year of CO, and 200,868 tons per year of CO₂e.

24. These dramatic increases in emissions limitations occur against the backdrop of Ashtabula's particular susceptibility to significant deterioration of air quality. In 2018, the American Lung Association gave Ashtabula County an "F" rating for Ozone in its State of the Air report. Moreover, monitoring efforts by ACCW and others demonstrate that the air quality in Ashtabula in the immediate vicinity of the Facility frequently meets or exceeds National Ambient Air Quality Standards for multiple criteria pollutants.

25. The Ashtabula community is particularly vulnerable to the adverse effects of air pollution and degraded air quality. For instance, an above average number of residents are greater than 65 years of age as compared with statewide totals. An above average number of Ashtabula residents live in poverty and lack health insurance as compared with statewide totals. Ashtabula residents are disproportionately impacted by high blood pressure, diabetes, and asthma.

26. Despite its challenges, Ashtabula enjoys a vibrant tourism industry and valuable natural and scenic resources, including, but not limited to: Bridge Street, which has been recognized as among the best “Main Streets” in America, and features a marina and boat launch, Walnut Beach, Lake Shore Park, and Point Park. Each of these resources provides residents and tourists access to the use and enjoyment of the Ashtabula River and Lake Erie. All of these resources stand to be impacted by the construction and emissions activities authorized by the Permit.

Statutory and Regulatory Framework

27. The Clean Air Act was enacted in order “to protect and enhance the quality of the Nation’s air resources so as to promote the public health and welfare and the productive capacity of its population.” 42 U.S.C. § 7401(b)(1).

28. The Act takes a cooperative federalism approach to the regulation of air pollution, tasking the United States Environmental Protection Agency with establishing National Ambient Air Quality Standards (NAAQS), and requiring states to develop State Implementation Plans (SIP) in order to achieve those NAAQS. 42 U.S.C. § 7408 – 7409.

29. In implementing its SIP, a state classifies areas within its borders as “attainment,” “nonattainment,” or “unclassifiable,” depending on the area’s compliance with various NAAQS. 42 U.S.C. § 7407(d). A state’s SIP must include air pollution permitting schemes that vary according to the attainment status where a proposed source is located. 42 U.S.C. § 7410(a)(2)(C).

30. The Act explicitly recognizes the need to “protect public health and welfare... notwithstanding attainment and maintenance of all national ambient air quality standards.” 42 U.S.C. § 7470.

31. In furtherance of its pollution prevention and reduction goals, Act establishes several permitting programs, including the Prevention of Significant Deterioration (PSD) Program, which applies to new sources constructed in attainment areas. *See* 42 U.S.C. §§ 7470 – 7492.

32. The purpose of the PSD Program includes, *inter alia*, “to protect public health and welfare from any... air pollution or from exposures to pollutants in other media,” “to preserve, protect, and enhance the air quality in national parks, national wilderness areas, national monuments, national seashores, and other areas of special national or regional natural, recreational, scenic, or historic value[,]” and “to insure that economic growth will occur in a manner consistent with the preservation of existing clean air resources[.]” 42 U.S.C. § 7470.

33. In order to receive a Permit-to-Install under the PSD program, a proposed new stationary source must make several demonstrations in its permit application, including: (1) installation of Best Available Control Technology (“BACT”), (2) an Air Quality Analysis showing that new emissions will not cause or contribute to a violation of any applicable NAAQS or PSD increment, and (3) an analysis of additional impacts to air, ground, and water pollution on soils, vegetation, and visibility. *See* Ohio Adm. Code Chapter 3745-3.

34. BACT refers to “an emission limitation based on the maximum degree of reduction of each pollutant subject to regulation under this Act emitted from or which results from any major emitting facility, which the permitting authority, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such facility through application of production processes and available methods, systems, and

techniques, including fuel cleaning, clean fuels, or treatment or innovative fuel combustion techniques for control of each such pollutant.” 42 U.S.C. 7479. The state-level equivalent concept, Best Available Technology (“BAT”), means “any combination of work practices, raw material specifications, throughput limitations, source design characteristics, an evaluation of the annualized cost per ton of pollutant removed, and air pollution control devices that have been previously demonstrated to the director of environmental protection to operate satisfactorily in this state or other states with similar air quality on substantially similar air pollution sources.” R.C. 3704.01(F).

35. In preparing an additional impact analysis, an applicant must “provide an analysis of the impairment to visibility, soils and vegetation that would occur as a result of the stationary source or modification and general commercial, residential, industrial and other growth associated with the stationary source or modification” as well as “provide an analysis of the air quality impact projected for the attainment area as a result of general commercial, residential, industrial and other growth associated with the stationary source or modification.” Ohio Adm. Code 3745-31-1.

ASSIGNMENTS OF ERROR

36. The Director’s issuance of the Permit is arbitrary, capricious, and otherwise inconsistent with law. Specifically,

- a. The Permit is based on flawed modelling that does not reliably establish whether the facility will violate National Ambient Air Quality Standards (NAAQS) for multiple pollutants when emitted at the levels authorized in the Permit, in violation of the Act and Ohio Adm. Code 3745-31-05(A)(1). To wit:

- i. The air dispersion modelling relied upon in issuing Permit fails to utilize on-site meteorological data and/or off-site data properly demonstrated as being representative of meteorological conditions at the facility;
 - ii. The air dispersion modelling relied upon in issuing the Permit fails to accurately assess the background concentration of modelled pollutants;
 - iii. The air dispersion modelling relied upon in issuing the Permit fails to accurately assess the background concentration of the modelled pollutants;
 - iv. The air dispersion modelling relied upon in issuing the Permit fails to accurately and reasonably determine the Potential to Emit of air contaminants;
- b. The Permit is likewise based on flawed modelling that does not reliably establish whether the facility will comply with applicable PSD increments or Air Ceilings, including Ohio's Generally Acceptable Incremental Impact, in violation of the Act and Ohio Adm. Code 3745-31-11.
- c. The Permit fails to impose applicable New Source Performance Standards (NSPS), 40 C.F.R. Part 60, including, without limitation:
 - i. Limitations on emissions of particulate matter contained in 40 C.F.R. § 60.272a;
 - ii. Emission monitoring requirements contained in 40 C.F.R. § 60.272a;
 - iii. Monitoring of operations requirements contained in 40 C.F.R. § 274a;
 - iv. Test method and procedures contained in 40 C.F.R. § 275a;
 - v. Recordkeeping and reporting requirements contained in 40 C.F.R. § 60.276a;
 - vi. Applicable limitations in 40 C.F.R. §§ 60.4230 – 60.4248;
 - vii. Other applicable NSPS.

- d. The Permit is based on flawed modeling that does not reliably establish the Potential to Emit of the quantity of air contaminants to be emitted from the Facility, which in turn results in the Permit failing to reliably establish the applicability of additional NSPS and/or the program strictures of the National Emission Standards for Hazardous Air Pollutants (“NESHAP”). *See* 42 U.S.C. §§ 7411, 7412.
- e. The Permit fails to impose BACT and BAT which achieve the maximum degree of reduction of pollutants, in violation of the Act and of Ohio Adm. Code 3745-31-15. Specifically, but without limitation, the Permit’s BACT and BAT failures include utilizing purported work practice standards that are too vague to insure maximum stringency of controls.
- f. The Permit’s monitoring requirements are insufficient to assure reasonable compliance with permit limits and assumptions, including, but not limited to: insufficient frequency of stack testing, failure to incorporate continuous parametric monitoring, and failure to assure compliance with permit conditions and state air nuisance requirements through incorporating monitoring, including fence line monitoring.
- g. The Permit’s failure to mandate construction of the previously required CO₂ recapture facility constitutes impermissible backsliding in violation of the Act, its promulgating regulations, and Ohio Adm. Code 3745-31-05.
- h. The Permit’s failure to maintain more stringent emissions limits contained in the previous permit constitutes impermissible backsliding in violation of the Act, its promulgating regulations, and Ohio Adm. Code 3745-31-05 and 3745-31-11.

37. Appellants reserve the right to amend or supplement this Notice of Appeal upon the discovery of additional facts or issues that may be determined upon the filing of the certified record or as may be determined in the course of discovery during the proceedings herein.

RELIEF REQUESTED

WHEREFORE, the Appellants respectfully request the Commission provide the following relief:

- a. Vacate the Director's decision to issue Permit to Install No. P0127678, and remand with instructions to deny the permit and/or conduct further review consistent with the Commission's directions;
- b. Preliminarily and finally enjoin Petmin, USA from installing or operating the facilities contemplated in Permit to Install No. P0127678;
- c. Award Appellants their costs and expenses, including attorneys fees and expert witness fees, as incurred, pursuant to R.C. 119.092; and
- d. Any and all other relief to which Appellants may be entitled under law.

Respectfully submitted,

Andrew J. Karas, Esq. (97153)

Andrew J. Karas, Esq.
Counsel for Appellants

Exhibit A – Permit to Install No. P0127678

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

Authorization

Facility ID: 0204012023
Facility Description: Merchant Pig Iron Production
Application Number(s): A0064851, A0066143
Permit Number: P0127678
Permit Description: New facility to convert iron ore pellets to merchant pig iron.
Permit Type: Initial Installation
Permit Fee: \$5,025.00
Issue Date: 07/17/2020
Effective Date: 07/17/2020

This document constitutes issuance to:

Petmin USA Incorporated
1003 Bridge Street
Ashtabula, OH 44004

of a Permit-to-Install for the emissions unit(s) identified on the following page.

Ohio Environmental Protection Agency (EPA) District Office or local air agency responsible for processing and administering your permit:

Ohio EPA DAPC, Northeast District Office
2110 East Aurora Rd.
Twinsburg, OH 44087
(330)963-1200

The above named entity is hereby granted a Permit-to-Install for the emissions unit(s) listed in this section pursuant to Chapter 3745-31 of the Ohio Administrative Code. Issuance of this permit does not constitute expressed or implied approval or agreement that, if constructed or modified in accordance with the plans included in the application, the emissions unit(s) of environmental pollutants will operate in compliance with applicable State and Federal laws and regulations, and does not constitute expressed or implied assurance that if constructed or modified in accordance with those plans and specifications, the above described emissions unit(s) of pollutants will be granted the necessary permits to operate (air) or NPDES permits as applicable.

This permit is granted subject to the conditions attached hereto.

Ohio Environmental Protection Agency

Entered into the Journal of the Director on:

A handwritten signature in black ink that reads "Laurie A. Stevenson".

Laurie A. Stevenson
Director

Date: 07/17/2020

Authorization (continued)

Permit Number: P0127678

Permit Description: New facility to convert iron ore pellets to merchant pig iron.

Permits for the following Emissions Unit(s) or groups of Emissions Units are in this document as indicated below:

Emissions Unit ID:	B001
Company Equipment ID:	Startup boiler
Superseded Permit Number:	
General Permit Category and Type:	Not Applicable
Emissions Unit ID:	F001
Company Equipment ID:	Plant Roadways
Superseded Permit Number:	
General Permit Category and Type:	Not Applicable

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

A. Standard Terms and Conditions

2. Federally Enforceable Standard Terms and Conditions

- a) All Standard Terms and Conditions are federally enforceable, with the exception of those listed below which are enforceable under State law only:
 - (1) Standard Term and Condition A.2.a), Severability Clause
 - (2) Standard Term and Condition A.3.c) through A. 3.e), General Requirements
 - (3) Standard Term and Condition A.6.c), Compliance Requirements
 - (4) Standard Term and Condition A.9., Reporting Requirements
 - (5) Standard Term and Condition A.10., Applicability
 - (6) Standard Term and Condition A.11.b) through A.11.e), Construction of New Source(s) and Authorization to Install
 - (7) Standard Term and Condition A.14., Public Disclosure
 - (8) Standard Term and Condition A.15., Additional Reporting Requirements When There Are No Deviations of Federally Enforceable Emission Limitations, Operational Restrictions, or Control Device Operating Parameter Limitations
 - (9) Standard Term and Condition A.16., Fees
 - (10) Standard Term and Condition A.17., Permit Transfers

3. Severability Clause

- a) A determination that any term or condition of this permit is invalid shall not invalidate the force or effect of any other term or condition thereof, except to the extent that any other term or condition depends in whole or in part for its operation or implementation upon the term or condition declared invalid.
- b) All terms and conditions designated in parts B and C of this permit are federally enforceable as a practical matter, if they are required under the Act, or any of its applicable requirements, including relevant provisions designed to limit the potential to emit of a source, are enforceable by the Administrator of the U.S. EPA and the State and by citizens (to the extent allowed by section 304 of the Act) under the Act. Terms and conditions in parts B and C of this permit shall not be federally enforceable and shall be enforceable under State law only, only if specifically identified in this permit as such.

4. General Requirements

- a) Any noncompliance with the federally enforceable terms and conditions of this permit constitutes a violation of the Act and is grounds for enforcement action or for permit revocation, revocation and re-issuance, or modification.

- b) It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the federally enforceable terms and conditions of this permit.
- c) This permit may be modified, revoked, or revoked and reissued, for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or revocation, or of a notification of planned changes or anticipated noncompliance does not stay any term and condition of this permit.
- d) This permit does not convey any property rights of any sort, or any exclusive privilege.
- e) The permittee shall furnish to the Director of the Ohio EPA, or an authorized representative of the Director, upon receipt of a written request and within a reasonable time, any information that may be requested to determine whether cause exists for modifying or revoking this permit or to determine compliance with this permit. Upon request, the permittee shall also furnish to the Director or an authorized representative of the Director, copies of records required to be kept by this permit. For information claimed to be confidential in the submittal to the Director, if the Administrator of the U.S. EPA requests such information, the permittee may furnish such records directly to the Administrator along with a claim of confidentiality.

5. Monitoring and Related Record Keeping and Reporting Requirements

- a) Except as may otherwise be provided in the terms and conditions for a specific emissions unit, the permittee shall maintain records that include the following, where applicable, for any required monitoring under this permit:
 - (1) The date, place (as defined in the permit), and time of sampling or measurements.
 - (2) The date(s) analyses were performed.
 - (3) The company or entity that performed the analyses.
 - (4) The analytical techniques or methods used.
 - (5) The results of such analyses.
 - (6) The operating conditions existing at the time of sampling or measurement.
- b) Each record of any monitoring data, testing data, and support information required pursuant to this permit shall be retained for a period of five years from the date the record was created. Support information shall include, but not be limited to all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. Such records may be maintained in computerized form.
- c) Except as may otherwise be provided in the terms and conditions for a specific emissions unit, the permittee shall submit required reports in the following manner:
 - (1) Reports of any required monitoring and/or recordkeeping of federally enforceable information shall be submitted to the Ohio EPA DAPC, Northeast District Office.

- (2) Quarterly written reports of (i) any deviations from federally enforceable emission limitations, operational restrictions, and control device operating parameter limitations, excluding deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06, that have been detected by the testing, monitoring and recordkeeping requirements specified in this permit, (ii) the probable cause of such deviations, and (iii) any corrective actions or preventive measures taken, shall be made to the Ohio EPA DAPC, Northeast District Office. The written reports shall be submitted (i.e., postmarked) quarterly, by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. See A.15. below if no deviations occurred during the quarter.
 - (3) Written reports, which identify any deviations from the federally enforceable monitoring, recordkeeping, and reporting requirements contained in this permit shall be submitted to the Ohio EPA DAPC, Northeast District Office every six months, by January 31 and July 31 of each year for the previous six calendar months. If no deviations occurred during a six-month period, the permittee shall submit a semi-annual report, which states that no deviations occurred during that period.
 - (4) This permit is for an emissions unit located at a Title V facility. Each written report shall be signed by a responsible official certifying that, based on information and belief formed after reasonable inquiry, the statements and information in the report are true, accurate, and complete.
- d) The permittee shall report actual emissions pursuant to OAC Chapter 3745-78 for the purpose of collecting Air Pollution Control Fees.

6. Scheduled Maintenance/Malfunction Reporting

Any scheduled maintenance of air pollution control equipment shall be performed in accordance with paragraph (A) of OAC rule 3745-15-06. The malfunction, i.e., upset, of any emissions units or any associated air pollution control system(s) shall be reported to the Ohio EPA DAPC, Northeast District Office in accordance with paragraph (B) of OAC rule 3745-15-06. (The definition of an upset condition shall be the same as that used in OAC rule 3745-15-06(B)(1) for a malfunction). The verbal and written reports shall be submitted pursuant to OAC rule 3745-15-06.

Except as provided in that rule, any scheduled maintenance or malfunction necessitating the shutdown or bypassing of any air pollution control system(s) shall be accompanied by the shut down of the emission unit(s) that is (are) served by such control system(s).

7. Compliance Requirements

- a) All applications, notifications or reports required by terms and conditions in this permit to be submitted or "reported in writing" are to be submitted to Ohio EPA through the Ohio EPA's eBusiness Center: Air Services web service ("Air Services"). Ohio EPA will accept hard copy submittals on an as-needed basis if the permittee cannot submit the required documents through the Ohio EPA eBusiness Center. In the event of an alternative hard copy submission in lieu of the eBusiness Center, the post-marked date or the date the document is delivered in person will be recognized as the date submitted. Electronic submission of applications, notifications or reports required to be submitted to Ohio EPA fulfills the requirement to submit the required information to the Director, the appropriate Ohio EPA District Office or contracted local air agency, and/or any

other individual or organization specifically identified as an additional recipient identified in this permit unless otherwise specified. Consistent with OAC rule 3745-15-03, the electronic signature date shall constitute the date that the required application, notification or report is considered to be "submitted". Any document requiring signature may be represented by entry of the personal identification number (PIN) by responsible official as part of the electronic submission process or by the scanned attestation document signed by the Authorized Representative that is attached to the electronically submitted written report.

Any document (including reports) required to be submitted and required by a federally applicable requirement in this permit shall include a certification by a Responsible Official that, based on information and belief formed after reasonable inquiry, the statements in the document are true, accurate, and complete.

- b) Upon presentation of credentials and other documents as may be required by law, the permittee shall allow the Director of the Ohio EPA or an authorized representative of the Director to:
 - (1) At reasonable times, enter upon the permittee's premises where a source is located, or the emissions-related activity is conducted, or where records must be kept under the conditions of this permit.
 - (2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit, subject to the protection from disclosure to the public of confidential information consistent with ORC section 3704.08.
 - (3) Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit.
 - (4) As authorized by the Act, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit and applicable requirements.
- c) The permittee shall submit progress reports to the Ohio EPA DAPC, Northeast District Office concerning any schedule of compliance for meeting an applicable requirement. Progress reports shall be submitted semiannually or more frequently if specified in the applicable requirement or by the Director of the Ohio EPA. Progress reports shall contain the following:
 - (1) Dates for achieving the activities, milestones, or compliance required in any schedule of compliance, and dates when such activities, milestones, or compliance were achieved.
 - (2) An explanation of why any dates in any schedule of compliance were not or will not be met, and any preventive or corrective measures adopted.

8. Best Available Technology

As specified in OAC Rule 3745-31-05, new sources that must employ Best Available Technology (BAT) shall comply with the Applicable Emission Limitations/Control Measures identified as BAT for each subject emissions unit.

9. Air Pollution Nuisance

The air contaminants emitted by the emissions units covered by this permit shall not cause a public nuisance, in violation of OAC rule 3745-15-07.

10. Reporting Requirements

The permittee shall submit required reports in the following manner:

- a) Reports of any required monitoring and/or recordkeeping of state-only enforceable information shall be submitted to the Ohio EPA DAPC, Northeast District Office.
- b) Except as otherwise may be provided in the terms and conditions for a specific emissions unit, quarterly written reports of (a) any deviations (excursions) from state-only required emission limitations, operational restrictions, and control device operating parameter limitations that have been detected by the testing, monitoring, and recordkeeping requirements specified in this permit, (b) the probable cause of such deviations, and (c) any corrective actions or preventive measures which have been or will be taken, shall be submitted to the Ohio EPA DAPC, Northeast District Office. If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly, by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters. (These quarterly reports shall exclude deviations resulting from malfunctions reported in accordance with OAC rule 3745-15-06.)

11. Applicability

This Permit-to-Install is applicable only to the emissions unit(s) identified in the Permit-to-Install. Separate application must be made to the Director for the installation or modification of any other emissions unit(s) not exempt from the requirement to obtain a Permit-to-Install.

12. Construction of New Sources(s) and Authorization to Install

- a) This permit does not constitute an assurance that the proposed source will operate in compliance with all Ohio laws and regulations. This permit does not constitute expressed or implied assurance that the proposed facility has been constructed in accordance with the application and terms and conditions of this permit. The action of beginning and/or completing construction prior to obtaining the Director's approval constitutes a violation of OAC rule 3745-31-02. Furthermore, issuance of this permit does not constitute an assurance that the proposed source will operate in compliance with all Ohio laws and regulations. Issuance of this permit is not to be construed as a waiver of any rights that the Ohio Environmental Protection Agency (or other persons) may have against the applicant for starting construction prior to the effective date of the permit. Additional facilities shall be installed upon orders of the Ohio Environmental Protection Agency if the proposed facilities cannot meet the requirements of this permit or cannot meet applicable standards.
- b) If applicable, authorization to install any new emissions unit included in this permit shall terminate within eighteen months of the effective date of the permit if the owner or operator has not undertaken a continuing program of installation or has not entered into a binding contractual obligation to undertake and complete within a reasonable time a continuing program of installation. This deadline may be extended once by 12 months if application is made to the

Director within a reasonable time before the termination date and the permittee shows good cause for any such extension.

- c) The permittee may notify Ohio EPA of any emissions unit that is permanently shut down (i.e., the emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31) by submitting a certification from the authorized official that identifies the date on which the emissions unit was permanently shut down. Authorization to operate the affected emissions unit shall cease upon the date certified by the authorized official that the emissions unit was permanently shut down. At a minimum, notification of permanent shut down shall be made or confirmed by marking the affected emissions unit(s) as "permanently shut down" in "Air Services" along with the date the emissions unit(s) was permanently removed and/or disabled. Submitting the facility profile update electronically will constitute notifying the Director of the permanent shut down of the affected emissions unit(s).
- d) The provisions of this permit shall cease to be enforceable for each affected emissions unit after the date on which an emissions unit is permanently shut down (i.e., emissions unit has been physically removed from service or has been altered in such a way that it can no longer operate without a subsequent "modification" or "installation" as defined in OAC Chapter 3745-31). All records relating to any permanently shut down emissions unit, generated while the emissions unit was in operation, must be maintained in accordance with law. All reports required by this permit must be submitted for any period an affected emissions unit operated prior to permanent shut down. At a minimum, the permit requirements must be evaluated as part of the reporting requirements identified in this permit covering the last period the emissions unit operated.

Unless otherwise exempted, no emissions unit certified by the responsible official as being permanently shut down may resume operation without first applying for and obtaining a permit pursuant to OAC Chapter 3745-31 and OAC Chapter 3745-77 if the restarted operation is subject to one or more applicable requirements.

- e) The permittee shall comply with any residual requirements related to this permit, such as the requirement to submit a deviation report, air fee emission report, or other any reporting required by this permit for the period the operating provisions of this permit were enforceable, or as required by regulation or law. All reports shall be submitted in a form and manner prescribed by the Director. All records relating to this permit must be maintained in accordance with law.

13. Permit-To-Operate Application

The permittee is required to apply for a Title V permit pursuant to OAC Chapter 3745-77. The permittee shall submit a complete Title V permit application or a complete Title V permit modification application within twelve (12) months after commencing operation of the emissions units covered by this permit. However, if operation of the proposed new or modified source(s) as authorized by this permit would be prohibited by the terms and conditions of an existing Title V permit, a Title V permit modification of such new or modified source(s) pursuant to OAC rule 3745-77-04(D) and OAC rule 3745-77-08(C)(3)(d) must be obtained before operating the source in a manner that would violate the existing Title V permit requirements.

14. Construction Compliance Certification

The applicant shall identify the following dates in the "Air Services" facility profile for each new emissions unit identified in this permit.

- a) Completion of initial installation date shall be entered upon completion of construction and prior to start-up.
- b) Commence operation after installation or latest modification date shall be entered within 90 days after commencing operation of the applicable emissions unit.

15. Public Disclosure

The facility is hereby notified that this permit, and all agency records concerning the operation of this permitted source, are subject to public disclosure in accordance with OAC rule 3745-49-03.

16. Additional Reporting Requirements When There Are No Deviations of Federally Enforceable Emission Limitations, Operational Restrictions, or Control Device Operating Parameter Limitations

If no deviations occurred during a calendar quarter, the permittee shall submit a quarterly report, which states that no deviations occurred during that quarter. The reports shall be submitted quarterly by January 31, April 30, July 31, and October 31 of each year and shall cover the previous calendar quarters.

17. Fees

The permittee shall pay fees to the Director of the Ohio EPA in accordance with ORC section 3745.11 and OAC Chapter 3745-78. The permittee shall pay all applicable permit-to-install fees within 30 days after the issuance of any permit-to-install. The permittee shall pay all applicable permit-to-operate fees within thirty days of the issuance of the invoice.

18. Permit Transfers

Any transferee of this permit shall assume the responsibilities of the prior permit holder. The new owner must update and submit the ownership information via the "Owner/Contact Change" functionality in "Air Services" once the transfer is legally completed. The change must be submitted through "Air Services" within thirty days of the ownership transfer date.

19. Risk Management Plans

If the permittee is required to develop and register a risk management plan pursuant to section 112(r) of the Clean Air Act, as amended, 42 U.S.C. 7401 et seq. ("Act"), the permittee shall comply with the requirement to register such a plan.

20. Title IV Provisions

If the permittee is subject to the requirements of 40 CFR Part 72 concerning acid rain, the permittee shall ensure that any affected emissions unit complies with those requirements. Emissions exceeding any allowances that are lawfully held under Title IV of the Act, or any regulations adopted thereunder, are prohibited.

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

B. Facility-Wide Terms and Conditions

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

1. All the following facility-wide terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only:
 - a) None.

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

C. Emissions Unit Terms and Conditions

1. B001, Startup boiler

Operations, Property and/or Equipment Description:

15.17 MMBtu/hr, natural gas-fired startup boiler.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rules 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 1.1E-1 lb/hr (filterable and condensable) and 4.9E-1 ton per rolling, 12-month period.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 6.3E-1 lb/hr and 2.78 tons per rolling, 12-month period.</p> <p>Source design characteristic: The burner is designed to meet 4.18E-02 lb of NO_x/MMBtu.</p> <p>Carbon monoxide (CO) emissions shall not exceed 1.25 lbs/hr and 5.47 tons per rolling, 12-month period.</p> <p>Carbon dioxide equivalent (CO_{2e}) emissions shall not exceed 1,784 lbs/hr and 7,814 tons per rolling, 12-month period.</p>
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} .

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-17-10(B)(1)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant to OAC rules 3745-31-10 through 20.
d.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
e.	OAC rule 3745-18-06(A)	This emissions unit is exempt from this rule when natural gas is the only fuel burned.
f.	40 CFR Part 60, Subpart Dc	This emissions unit is not subject to the emission limitations listed in 40 CFR Part 60, Subpart Dc as long as natural gas is the only fuel burned. See b)(2)a, d)(2) and e)(1).
g.	40 CFR Part 63, Subpart JJJJJJ	This emissions unit is not subject to the requirements in this Subpart, because it is a gas-fired boiler as defined by the Subpart.

(2) Additional Terms and Conditions

- a. The application and enforcement of the provisions of the New Source Performance Standards (NSPS), as promulgated by the United States Environmental Protection Agency (U.S. EPA), 40 CFR Part 60, are delegated to the Ohio Environmental Protection Agency (Ohio EPA).

c) Operational Restrictions

- (1) The permittee shall burn only natural gas in this emissions unit.

d) Monitoring and/or Recordkeeping Requirements

- (1) For each day during which the permittee burns a fuel other than natural gas, the permittee shall maintain a record of the type and quantity of fuel burned in this emissions unit.
- (2) The permittee shall record and maintain the following records each month for this emissions unit:
 - a. the amount of natural gas combusted, in MMscf/month;
 - b. the amount of natural gas combusted, in MMscf/12-month rolling period;
 - c. the heat of combustion from natural gas, in MMBtu/12-month rolling period; and
 - d. the emission rates, in tons/12-month rolling period, using the compliance methods in f)(1)a. through f)(1)d. for PM₁₀ and PM_{2.5} (filterable and condensable), NO_x, CO and GHGs.

e) Reporting Requirements

- (1) The permittee shall submit deviation (excursion) reports that identify each day when a fuel other than natural gas was burned in this emissions unit. Each report shall be submitted within 30 days after the deviation occurs.
- (2) The permittee shall submit quarterly deviation (excursion) reports that identify each month when any of the 12-month rolling emission limits were exceeded for PM₁₀ and PM_{2.5} (filterable and condensable), NO_x, CO and GHGs, and the amount of emissions of each such deviation.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

PM₁₀ and PM_{2.5} emissions shall not exceed 1.1E-1 lb/hr (filterable and condensable) and 4.9E-1 ton per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B$$

where:

E = PM₁₀/PM_{2.5} emission rate, in lbs/hr;

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

A = emission factor, 7.45E-03 lb of PE/PM₁₀/MMBtu (7.6 lb/MMscf), AP-42 Section 1.4, July 98 (filterable and condensable); and
B = 15.17 MMBtu/hr, heat input.

Compliance with the annual PM₁₀/PM_{2.5} emission limitation (4.9E-1 ton per rolling, 12-month period) shall be determined by multiplying the emission factor (7.6 lb/MMscf) by the amount of natural gas fired, (MMscf/12-month rolling period) as recorded in d)(2) and then dividing by 2,000 lbs/ton.

If required, the permittee shall demonstrate compliance with this PM₁₀/PM_{2.5} emission limitation through emission tests performed in accordance with the procedures specified in 40 CFR Part 51, Appendix M, Methods 201 or 201A and 202.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

b. Emission Limitation:

NO_x emissions shall not exceed 6.3E-1 lb/hr and 2.78 tons per rolling, 12-month period.

Source design characteristic:

The burner is designed to meet 4.18E-02 lb of NO_x/MMBtu.

The source design characteristic was established based on the information provided by the permittee in permit application #A0064851.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B$$

where:

E = NO_x emission rate, in lbs/hr;
A = emission factor, 4.18E-02 lb of NO_x/MMBtu - burner manufacturer; and
B = 15.17 MMBtu/hr, heat input.

Compliance with the annual NO_x emission limitation (2.78 tons per rolling, 12-month period) shall be determined by multiplying the emission factor (4.18E-02 lb/MMBtu) by the heat of combustion of natural gas as a rolling 12-month summation as recorded in d.2 and then dividing by 2,000 lbs/ton

If required, the permittee shall demonstrate compliance with this emission limitation through emission tests performed in accordance with 40 CFR Part 60, Appendix A, Method 7 or 7E.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

c. Emission Limitation:

CO emissions shall not exceed 1.25 lbs/hr and 5.47 tons per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A * B$$

where:

E = CO emission rate, in lbs/hr;

A = emission factor, 8.24E-02 lb of CO/MMBtu (84 lb/MMscf), AP-42 Section 1.4, July 98; and

B = 15.17 MMBtu/hr, heat input.

Compliance with the annual CO emission limitation (5.47 tons per rolling, 12-month period) shall be determined by multiplying the emission factor (84 lb/MMscf) by the amount of natural gas fired, (MMscf/12-month rolling period) as recorded in d)(2) and then dividing by 2,000 lbs/ton.

If required, the permittee shall demonstrate compliance with this emission limitation through emission tests performed in accordance with 40 CFR Part 60, Appendix A, Method 10.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

d. Emission Limitation:

CO_{2e} emissions shall not exceed 1,784 lbs/hr and 7,814 tons per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A * B$$

where:

E = CO_{2e} emission rate, in lbs/hr;

A = emission factor, 1.176E+02 lbs of CO_{2e}/MMBtu (120,000 lb/MMscf), AP-42 Section 1.4, July 98; and

$B = 15.17 \text{ MMBtu/hr, heat input.}$

Compliance with the annual CO_{2e} emission limitation (7,814 tons per rolling, 12-month period) shall be determined by multiplying the emission factor (120,000 lb/MMscf) by the amount of natural gas fired, (MMscf/12-month rolling period) as recorded in d)(2) and then dividing by 2,000 lbs/ton.

e. Emission Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

g) Miscellaneous Requirements

(1) None.

2. F001, Plant Roadways

Operations, Property and/or Equipment Description:

Unpaved plant roadways and parking areas.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rules 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>2.2E-1 ton/year of fugitive particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀).</p> <p>2.0E-2 ton/year of fugitive particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}).</p> <p>Develop and implement a site-specific work practice plan designed as described in paragraph d)(1) below to minimize or eliminate fugitive dust emissions.</p>
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ or PM _{2.5} emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-17-07(B)(5)	There shall be no visible particulate matter emissions from any unpaved roadways and parking areas except for a period of time not to exceed thirteen (13) minutes during any 60-minute observation period.
d.	OAC rule 3745-17-08(B)	See b)(2)a. through b)(2)c.

(2) Additional Terms and Conditions

- a. The permittee shall employ best available control measures on all unpaved roadways and parking areas for the purpose of ensuring compliance with the above-mentioned applicable requirements. In accordance with the permittee's application, the permittee has committed to treat the unpaved roadways and parking areas by commercial dust suppressants and/or watering at sufficient treatment frequencies to ensure compliance. Control measures shall be implemented at the frequency identified by inspections performed in accordance with the Work Practice Plan. Nothing in this paragraph shall prohibit the permittee from employing other equally effective control measures to ensure compliance.
- b. The permittee shall promptly remove, in such a manner as to minimize or prevent re-suspension, earth and/or other material from paved streets onto which such material has been deposited by trucking or earth moving equipment or erosion by water or other means.
- c. Open-bodied vehicles transporting materials likely to become airborne shall have such materials covered at all times if the control measure is necessary for the materials being transported.

c) Operational Restrictions

- (1) None.

d) Monitoring and/or Recordkeeping Requirements

- (1) Work Practice Plan

The permittee shall develop and implement a site-specific work practice plan designed to minimize or eliminate fugitive dust from the permittees unpaved roadways and parking areas. This work practice plan shall include, at a minimum, the following elements:

- a. An identification of each roadway or parking area, or segment of roadway or parking area, for which the plan applies. The permittee can select whether to develop a plan based on segments or entire roads.
- b. A determination of the frequency that each roadway, parking area or segment will be inspected to determine if additional control measures are needed. The frequency of inspection can either be common for all segments of the roadway or parking areas or may be identified separately for various segments of the roadway or parking areas.
- c. The identification of the record keeping form/record that will be used to track the inspection and treatment of the roadways. This form/record should include, at a minimum, the following elements:
 - i. Roadway, parking area, or segment inspected;
 - ii. Date inspected;

- iii. Name of employee responsible for inspection;
 - iv. Result of the inspection (needs treated or does not need treated);
 - v. A description of why no treatment was needed;
 - vi. Date treated;
 - vii. Name of employee responsible for roadway, parking area, or segment treatment; and
 - viii. Method used to treat the roadway, parking area, or segment.
- d. A description of how and where the records shall be maintained.

The permittee shall begin using the Work Practice Plan within 30 days from the date Ohio EPA approved the initial plan. As needs warrant, the permittee can modify the Work Practice Plan. The permittee shall submit a copy of proposed revisions to the Work Practice Plan to the Ohio EPA Northeast District Office for review and approval. The permittee can begin using the revised Work Practice Plan once the Ohio EPA Northeast District Office has approved its use.

(2) Work Practice Plan Inspections

Except as otherwise provided in this section, the permittee shall perform inspections of each of the roadway segments and parking areas at frequencies described in the Work Practice Plan. The purpose of the inspections is to determine the need for implementing control measures. The inspections shall be performed during representative, normal traffic conditions. No inspection shall be necessary for a roadway or parking area that is covered with snow and/or ice or if precipitation has occurred that is sufficient for that day to ensure compliance with the above-mentioned applicable requirements. Any required inspection that is not performed due to any of the above-identified events shall be performed as soon as such event(s) has (have) ended, except if the next required inspection is within one week.

(3) Work Practice Plan Record Keeping

The permittee shall maintain records of the following information:

- a. The records required to be collected under the Work Practice Plan, and
- b. The date and reason any element of the Work Practice Plan was not implemented.

The permittee shall maintain these records in accordance to the Standard Terms and Conditions of Part A of this permit.

e) Reporting Requirements

- (1) Within 90 days prior to startup, the permittee shall submit their proposed Work Practice Plan to the Ohio EPA through the Ohio EPA's eBusiness Center: Air Services online web portal.

- (2) The permittee shall submit semiannual deviation reports that identify any of the following occurrences:
- each day during which an inspection was not performed by the required frequency, excluding an inspection which was not performed due to an exemption for snow and/or ice cover or precipitation; and
 - each instance when a control measure, that was to be implemented as a result of an inspection, was not implemented.

The deviation reports shall be submitted in accordance with the reporting requirements of the Standard Terms and Conditions of this permit.

- (3) Unless other arrangements have been approved by the Director, all notifications and reports shall be submitted through the Ohio EPA's eBusiness Center: Air Services online web portal.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

2.2E-1 ton/year of fugitive PM₁₀; 2.0E-2 ton/year of fugitive PM_{2.5}

Applicable Compliance Method:

Compliance with fugitive PM₁₀ and PM_{2.5} limitations shall be determined by using the emission factor equations in Section 13.2.2, in Compilation of Air Pollutant Emission Factors, AP-42, Fifth Edition, Volume 1 (revised 12/03) for unpaved roadways. These emission limits were based on the following assumptions by the permittee:

108 miles traveled per year for Slag Pot Carriers;

1,485 miles traveled per year for Slag Trucks;

289 miles traveled per year for Fines Trucks;

4,148 miles traveled per year for Maintenance Trucks;

2,420 miles per year for CO₂ Trucks; and

95% control efficiency for PM₁₀, and PM_{2.5} emissions.

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

b. Emission Limitation:

There shall be no visible particulate matter emissions from any unpaved roadways and parking areas except for a period of time not to exceed thirteen (13) minutes during any 60-minute observation period.

Applicable Compliance Method:

If required, compliance with the visible particulate matter emission limitation listed above shall be determined in accordance with Test Method 22 as set forth in "Appendix on Test Methods" in 40 CFR, Part 60 ("Standards of Performance for New Stationary Sources"), as such Appendix existed on July 1, 1996, and the modifications listed in paragraphs (B)(4)(a) through (B)(4)(d) of OAC rule 3745-17-03.

g) Miscellaneous Requirements

(1) None.

3. P001, Process gas heater

Operations, Property and/or Equipment Description:

218.9 MMBtu/hr, natural gas and process gas-fired process gas heater, with optional top-gas treatment for waste gas removal, controlled by a thermal oxidizer and scrubber.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 1.63 lbs/hr (filterable and condensable) and 7.14 tons per rolling, 12-month period.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 18.88 lbs/hr and 82.71 tons per rolling, 12-month period.</p> <p>Carbon monoxide (CO) emissions shall not exceed 11.17 lbs/hr and 48.92 tons per rolling, 12-month period.</p> <p>Carbon dioxide equivalent (CO_{2e}) emissions shall not exceed 70,203 lbs/hr and 307,490 tons per rolling, 12-month period.</p> <p>See b)(2)a.</p>
b.	ORC 3704.03(T) and OAC rule 3745-31-05(A)(3)	The Best Available Technology (BAT) requirements established pursuant to ORC rule 3704.03(T) and OAC rule 3745-31-05(A)(3) have been determined to be

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		equivalent to OAC rules 3745-31-10 through 20 for NO _x and CO.
c.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
d.	OAC rule 3745-17-10(B)(1)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant to OAC rules 3745-31-10 through 20.
e.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
f.	OAC rule 3745-18-06(E)(2)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant to OAC rule 3745-31-05(F).
g.	OAC rule 3745-31-05(F)	SO ₂ emissions shall not exceed 7.9E-1 lb/hr and 3.46 tons per rolling, 12-month period. See b)(2)b.
h.	OAC rule 3745-110-03(K)(20)	Exempt. See b)(2)c.

(2) Additional Terms and Conditions

- a. In the event, the permittee does not demonstrate compliance by meeting the limit(s) of 18.88 lbs/hr for NO_x or 11.17 lbs/hr for CO through initial performance testing as specified in sections f)(1)b, f)(1)c and f)(2), then the permittee shall re-evaluate BACT and re-submit a permit modification along with supportive

documentation to the Ohio EPA for this emissions unit within 60 days at the completion of the tests.

- b. The permittee shall operate the top-gas treatment for waste gas removal at all times when the emissions unit is in operation, except when the top-gas is transported off-site to be treated by an independent, regulated processing plant. When operating the top-gas treatment at this facility, waste gas generated by this process shall be vented to a thermal oxidizer and SO₂ removal scrubber at all times.
 - c. The requirements of this rule do not apply since the emissions unit is subject to a BACT limitation for NO_x.
- c) Operational Restrictions
 - (1) The permittee shall burn only natural gas and process gas in this emissions unit.
- d) Monitoring and/or Recordkeeping Requirements
 - (1) For each day during which the permittee burns a fuel other than natural gas and process gas, the permittee shall maintain a record of the type and quantity of fuel burned in this emissions unit.
 - (2) For top-gas treatment at this facility, the permittee shall properly install, operate, and maintain continuous temperature monitor(s) and recorder(s) that measure(s) and record(s) the combustion temperature within the thermal oxidizer when the emissions unit is in operation, including periods of startup and shutdown. The permittee shall record the combustion temperature on a continuous basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee.

In order to maintain compliance with the applicable emission limitation contained in this permit, the acceptable combustion temperature within the thermal oxidizer, during any period of time when the emissions unit controlled by the thermal oxidizer is in operation, shall not be less than the average temperature measured (in degrees Fahrenheit) during the most recent performance test, based on a 3-hour block average, that demonstrated the emissions unit was/were in compliance. Until compliance testing has been conducted, the thermal oxidizer shall be operated and maintained in accordance with the manufacturer's recommendations, instructions, and the operating manual.
 - (3) For top-gas treatment at this facility, whenever the monitored average combustion temperature within the thermal oxidizer deviates from the range or limit established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:
 - a. the date and time the deviation began;
 - b. the magnitude of the deviation at that time;

- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range/limit specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken:

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the temperature readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

The temperature range/limit is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the appropriate Ohio EPA District Office or local air agency. The permittee may request revisions to the permitted temperature range/limit based upon information obtained during future performance tests that demonstrate compliance with the allowable emission rate(s) for the controlled pollutant(s). In addition, approved revisions to the temperature range/limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (4) For top-gas treatment at this facility, the permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop across the SO₂ removal scrubber (in inches of water), the SO₂ removal scrubber liquid flow rate (in gallons per minute), and the SO₂ removal scrubber liquid pH during operation of this emissions unit, including periods of startup and shutdown. The permittee shall record the pressure drop across the SO₂ removal scrubber and the SO₂ removal scrubber liquid's pH and flow rate on a once per shift basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee. The acceptable liquid flow rate, liquid pH and pressure drop across the SO₂ removal scrubber shall be based upon the manufacturer's specifications until such time

as any required performance testing is conducted and the appropriate range for each parameter is established to demonstrate compliance.

- (5) For top-gas treatment at this facility, whenever the monitored value for any parameter (pressure drop, liquid flow rate, pH) deviates from the range(s) or minimum limit(s) established in accordance with this permit for the SO₂ scrubber, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time;
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the control equipment parameters within the acceptable range(s), or at or above the minimum limit(s) specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken:

- f. a description of the corrective action;
- g. the date the corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop, flow rate, and pH readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

These range(s) and/or limit(s) for the pressure drop, liquid flow rate, and pH are effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the appropriate Ohio EPA District Office or local air agency. The permittee may request revisions to the permitted range or limit for the pressure drop, liquid flow rate, or pH based upon information obtained during future performance tests that demonstrate compliance with the SO₂ emission rate for this emissions unit. In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring

requirements of this permit and may be incorporated into this permit by means of an administrative modification.

- (6) The permittee shall collect and record the following information for each day when operating the top-gas treatment process:
 - a. a log of the downtime for the thermal oxidizer and/or monitoring equipment, when the associated emissions unit was in operation;
 - b. a log of the downtime for the SO₂ scrubber and/or monitoring equipment, when the associated emissions unit was in operation; and
 - c. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the thermal oxidizer and/or scrubber.
 - (7) The permittee shall record and maintain the following records each month for this emissions unit:
 - a. the operating hours of the process gas heater, in hours/month;
 - b. the operating hours of process gas heater, in hours/12-month rolling period;
 - c. the operating hours of the top-gas treatment unit, in hours/month;
 - d. the operating hours of the top-gas treatment unit, in hours/12-month rolling period; and
 - e. the emission rates, in tons/12-month rolling period, using the compliance methods in f)(1)a. through f)(1)d. for PM₁₀ and PM_{2.5} (filterable and condensable), NO_x, CO and GHGs.
- e) Reporting Requirements
- (1) The permittee shall submit deviation (excursion) reports that identify each day when a fuel other than natural gas and process gas was burned in this emissions unit. Each report shall be submitted within 30 days after the deviation occurs.
 - (2) The permittee shall submit quarterly deviation (excursion) reports that identify the following:
 - a. all period of time during which the average temperature within thermal oxidizer did not comply with the temperature limitation specified by the manufacturer and/or the temperature limitation established following any required compliance demonstration;
 - b. any records of downtime (date and length of time) for the thermal oxidizer, and/or the monitoring equipment when the emissions unit was in operation using the top-gas treatment process at this facility;

- c. each period of time (start time and date, and end time and date) when the pressure drop across the SO₂ removal scrubber, the liquid flow rate, or the liquid pH was outside of the appropriate range or limit specified by the manufacturer and/or outside of the acceptable range for each parameter following any required compliance demonstration;
- d. any records of downtime (date and length of time) for the SO₂ scrubber, and/or the monitoring equipment when the emissions unit was in operation using the top-gas treatment process at this facility; and
- e. any period of time (start time and date, and end time and date) when the emissions unit was in operation using the top-gas treatment process at this facility and emissions were not vented to the thermal oxidizer and/or SO₂ scrubber.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

- a. Emission Limitations:

PM₁₀ and PM_{2.5} emissions shall not exceed 1.63 lbs/hr (filterable and condensable) and 7.14 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B$$

where:

E = PM₁₀/PM_{2.5} emission rate, in lbs/hr;

A = emission factor, 7.45E-03 lb of PM₁₀/PM_{2.5}/MMBtu, AP-42 Section 1.4, July 98 (filterable and condensable); and

B = 218.9 MMBtu/hr, heat input.

Compliance with the annual PM₁₀ and PM_{2.5} emission limitation (7.14 tons per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 1.63 lbs/hr until the completion of any emission testing, then use most recent stack test results by the operating hours (hours/12-month, rolling period) as recorded in d)(7) and then dividing by 2,000 lbs/ton.

If required, the permittee shall demonstrate compliance with this PM₁₀/PM_{2.5} emission limitation through emission tests performed in accordance with the procedures specified in 40 CFR Part 51, Appendix M, Methods 201 or 201A and 202.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

b. Emission Limitations:

NO_x emissions shall not exceed 18.88 lbs/hr, and 82.71 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A*B*(1/C)*D$$

where:

E = NO_x emission rate, in lbs/hr;

A = NO_x emission factor: 42.2 ppmv from manufacturer design;

B = 46.01 molecular weight of NO_x;

C = 385.1E6 – conversion factor (lb/scf) from AP-42 Appendix A; and

D = 3,745,240 scf/hr – gas flowrate from permit application A0064851.

Compliance with the annual NO_x emissions limitation (82.71 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 18.88 lbs/hr until the completion of any emission testing, then use most recent stack test results by the operating hours (hours/12-month rolling period as recorded in d)(7) and then dividing by 2,000 lbs/ton.

The permittee shall demonstrate compliance with the emission limitation of 18.88 lbs/hr through performance tests conducted in accordance with the provisions in term f)(2) below.

c. Emission Limitation:

CO emissions shall not exceed 11.17 lbs/hr and 48.92 tons per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A*B*(1/C)*D$$

where:

E = CO emission rate, in lbs/hr;

A = CO emission factor: 41 ppmv from manufacturer design;

B = 28.01 molecular weight of CO;

C = 385.1E6 – conversion factor (lb/scf) from AP-42 Appendix A; and

D = 3,745,240 scf/hr – gas flowrate from permit application A0064851.

Compliance with the annual CO emission limitation (48.92 tons per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 11.17 lbs/hr, until the completion of any emission testing, then use most recent stack test results by the operating hours (hours/12-month, rolling period), as recorded in d)(7) and then dividing by 2,000 lbs/ton.

The permittee shall demonstrate compliance with the emission limitation of 11.17 lbs/hr through performance tests conducted in accordance with the provisions in term f)(2) below.

d. Emission Limitations:

CO_{2e} emissions shall not exceed 70,203 lbs/hr and 307,490 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A * B * (1/C) * D$$

where:

E = CO_{2e} emission rate, in lbs/hr;

A = CO₂ mission factor: 164,021 ppmv from manufacturer design;

B = 44.01 molecular weight of CO₂;

C = 385.1E6 – conversion factor (lb/scf) from AP-42 Appendix A; and

D = 3,745,240 scf/hr – gas flowrate from permit application A0064851.

Compliance with the annual CO_{2e} emissions limitation (307,490 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 70,203 lbs/hr, until the completion of any emission testing, then use most recent stack test results by the operating hours (hours/12-month rolling period), as recorded in d)(7) and then dividing by 2,000 lbs/ton.

e. Emission Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

f. Emission Limitations:

SO₂ emissions (excluding SO₂ emissions from products of combustion from firing gaseous fuel in the process gas heater) shall not exceed 7.9E-1 lb/hr and 3.46 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B \cdot (1/C) \cdot D$$

where:

E = SO₂ emission rate, in lbs/hr;

A = SO₂ emission factor: 12 ppmv from manufacturer design;

B = 64.06 molecular weight of SO₂;

C = 385.1E6 – conversion factor (lb/scf) from AP-42 Appendix A; and

D = 396,244.5 scf/hr – gas flowrate from permit application A0064851.

Compliance with the annual SO₂ emissions limitation (3.46 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 7.9E-1 lb/hr by the maximum number of hours in a 12-month rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emissions limitation, then the permittee will be in compliance with the annual emissions limitation.

The permittee shall demonstrate compliance with the emission limitation of 7.9E-1 lb/hr through performance tests conducted in accordance with the provisions in term f)(2) below.

(2) The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:

- a. The emission testing shall be conducted within 6-months after startup of the process gas heater, emissions unit P001.
- b. The emission testing shall be conducted to demonstrate compliance with the allowable NO_x, CO and SO₂ emission limits.
- c. The following test method(s) shall be employed to demonstrate compliance with the allowable emission limitations:

for NO_x: Methods 7 or 7E of 40 CFR Part 60, Appendix A;

for CO: Method 10 of 40 CFR Part 60, Appendix A;

for SO₂: Method 6 of 40 CFR Part 60, Appendix A; and

Methods 1 through 4 of 40 CFR Part 60, Appendix A

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

- d. During the emission testing, the emissions unit shall be operated under operational conditions approved in advance by the Ohio EPA Northeast District Office. Operational conditions that may need to be approved include, but are not limited to, the production rate, the type of material processed, material make-up (solvent content, etc.), or control equipment operational limitations (burner temperature, precipitator voltage, etc.). In general, testing shall be done under "worst case" conditions expected during the life of the permit. As part of the information provided in the "Intent to Test" notification form described below, the permittee shall provide a description of the emissions unit operational conditions they will meet during the emissions testing and describe why they believe "worst case" operating conditions will be met. Prior to conducting the test(s), the permittee shall confirm with the Ohio EPA Northeast District Office that the proposed operating conditions constitute "worst case". Failure to test under the approved conditions may result in Ohio EPA not accepting the test results as a demonstration of compliance.
 - e. Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the Ohio EPA Northeast District Office. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA Northeast District Office's refusal to accept the results of the emission test(s).
 - f. Personnel from the Ohio EPA Northeast District Office shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emissions unit and/or the performance of the control equipment.
 - g. A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the Ohio EPA Northeast District Office within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report, where warranted, with prior approval from the Ohio EPA Northeast District Office.
- g) Miscellaneous Requirements
- (1) None.

4. P007, Black Start Generator

Operations, Property and/or Equipment Description:

158 HP, diesel-fired black start generator

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 0.015 gram/bhp-hr (filterable) and 2.61E-4 ton/year.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 0.30 gram/bhp-hr and 5.22E-3 ton/year.</p> <p>Carbon monoxide (CO) emissions shall not exceed 3.7 gram/bhp-hr and 6.44E-2 ton/year.</p> <p>Carbon dioxide (CO₂) emissions shall not exceed 521.6 gram/bhp-hr and 9.09 tons/year.</p> <p>See b)(1)c. and c)(5).</p>
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		uncontrolled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-31-05(F)	The emission limitations for PM, NO _x and CO specified by this rule are equivalent to the ton/year emission limitations established under OAC rule 3745-31-10 through 20. See c)(5).
d.	40 CFR Part 60, Subpart IIII Tier IV Standards	The emission limitations for PM, NO _x and CO specified by this rule are equivalent to the emission limitations established under OAC rule 3745-31-10 through 20. The exhaust emissions from this engine shall not exceed: 0.14 gram VOC (NMHC)/bhp-hr Smoke emission limitations: As specified in 40 CFR 1039.105(a)(3), Tier IV engines are exempted from the smoke emission limitations when the particulate emission limitation is below 0.05 gram/bhp-hr (0.07 g/KWh) because an engine of such low PM level has inherently low smoke emission.
e.	40 CFR 60.4207(b) 40 CFR 80.510(b)	The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight. See b)(2)d, c)(2), d)(1), and e)(1)a.
f.	40 CFR Part 60, Subpart A (40 CFR 60.1 - 60.19)	Table 8 to Subpart IIII of 40 CFR Part 60 – Applicability of General Provisions to Subpart IIII shows which parts of the General Provisions in 40 CFR 60.1 - 60.19 apply.
g.	40 CFR Part 63, Subpart ZZZZ	A new area source operating in compliance with 40 CFR Part 60, Subpart IIII is the demonstration of compliance for 40 CFR Part 63, Subpart ZZZZ.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
h.	OAC rule 3745-17-11(B)(5)(a)	Particulate emissions shall not exceed 0.310 lb/MMBtu of actual heat input. The emission limitation specified by this rule is less stringent than the emission limitation established under OAC rule 3745-31-10 through 20.
i.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
j.	OAC rule 3745-18-06(B)	Exemption due to having a maximum heat input less than 10 MMBtu/hr.
k.	OAC rule 3745-110-03(K)(16) and (K)(20)	Exempt. See b)(2)e.

(2) Additional Terms and Conditions

- a. The application and enforcement of the provisions of the New Source Performance Standards (NSPS), as promulgated by the United States Environmental Protection Agency (U.S. EPA), 40 CFR Part 60, are delegated to the Ohio Environmental Protection Agency (Ohio EPA).
- b. The stationary compression ignition (CI) internal combustion engine (ICE) is subject to and shall be operated in compliance with the requirements of 40 CFR Part 60, Subpart IIII, the standards of performance for stationary CI ICE.
- c. The stationary CI ICE has been or shall be purchased certified by the manufacturer, for its useful life*, to emission standards as stringent as those identified in 40 CFR 60.4201(a) and found in 40 CFR 1039.101, Tables 1, for engines greater than or equal to 75 horsepower (56 kilowatt) and less than 175 horsepower (130 kilowatt), and to the opacity standards found in 40 CFR 1039.105.
- d. The quality of the diesel fuel burned in this emissions unit shall meet the following specifications on an "as received" basis:

- i. a sulfur content which is sufficient to comply with the allowable sulfur dioxide emission limitation of 0.0015 pound sulfur dioxide/MMBtu actual heat input; and 15 ppm sulfur or 0.0015% sulfur by weight; and
- ii. a minimum cetane index of 40 or a maximum aromatic content of 35 volume percent.

Compliance with the above-mentioned specifications shall be determined by purchase orders specifying that each shipment of oil received is ULSD compliant.

- e. The requirements of this rule do not apply since:
 - i. the emissions unit is subject to a BACT limitation for NO_x.

c) **Operational Restrictions**

- (1) The stationary CI ICE and any control device shall be installed, operated, and maintained according to the manufacturer's emission-related written instructions and the permittee shall only change those emission-related settings that are allowed by the manufacturer. The CI ICE must also be installed and operated to meet the applicable requirements from 40 CFR Part 89, Control of Emissions from New and In-use Non-road CI ICE; and Part 1068, the General Compliance Provisions for Engine Programs. The permittee shall operate and maintain the stationary CI ICE to achieve the emissions standards established in 40 CFR 60.4204 over the entire life of the engine(s).
- (2) Diesel fuel burned in the CI, ICE shall not exceed the limit for sulfur as specified by 40 CFR 80.510(b), i.e., the maximum sulfur content of diesel fuel shall not exceed 15 ppm or 0.0015% sulfur by weight.
- (3) If the stationary CI internal combustion engine is equipped with a diesel particulate filter to comply with the emission standards in 40 CFR 60.4204, the diesel particulate filter must be installed with a backpressure monitor that notifies the permittee when the high backpressure limit of the engine is approached.
- (4) The permittee shall install a non-resettable hour meter prior to startup of the engine.
- (5) The permittee shall operate this emissions unit for not more than 100 hours in a calendar year.

d) **Monitoring and/or Recordkeeping Requirements**

- (1) For each shipment of oil received for burning in this emissions unit, the permittee shall maintain records of each purchase order that identifies the total quantity of diesel oil received and a specification that each shipment of oil received is ULSD compliant. These records shall be retained for a minimum of 5 years and shall be available for inspection by the Director or his/her representative.
- (2) The permittee shall maintain the manufacturer's certification, that demonstrates compliance with the emission standards in Table 1 of 40 CFR 1039.101 and the opacity standards in 40 CFR 1039.105, on site or at a central location for all facility CI ICE; and the certification shall be made available for review upon request. If the manufacturer's

certification is not kept on site, the permittee shall maintain a log for the location of each ICE and it shall identify the agency-assigned emissions unit number, the manufacturer's identification number, and the certificate identification number. The manufacturer's operations manual and any written instructions or procedures developed by the permittee and approved by the manufacturer shall be maintained at the same location as the ICE.

- (3) If the stationary CI internal combustion engine is equipped with a diesel particulate filter to comply with the emission standards in 40 CFR 60.4204, the permittee shall keep records of the date, time, and any corrective action(s) taken in response to the notification from the backpressure monitor, that the high backpressure limit of the engine has been approached or exceeded.
- (4) The permittee shall maintain monthly log of the number of hours the engine is in operation, recorded through the non-resettable hour meter.

e) Reporting Requirements

- (1) The permittee shall submit a quarterly deviation report identifying the following:
 - a. any period of time (date and number of hours) that the quality of oil burned in this emissions unit did not meet the requirements established in 40 CFR 80.510(b), based upon the required fuel records; and the amount of non-compliant fuel burned on each such occasion;
 - b. if the stationary CI Internal combustion engine is equipped with a diesel particulate filter, any period of time (date and number of hours) that the engine exceeded high backpressure limit of the engine; and any corrective action(s) taken on each such occasion; and
 - c. any exceedance of the annual 100-hour limitation for operating this emissions unit, as documented by the non-resettable hour meter and operating log.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Opacity Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

b. Emission Limitations:

PM ($PM_{10} + PM_{2.5}$) emissions shall not exceed 0.015 gram/bhp-hr (filterable) (0.02 gram/KW-hr) and 2.61E-4 ton/year.

Applicable Compliance Methods:

Compliance with the emission limitation (0.015 gram PM ($PM_{10} + PM_{2.5}$)/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than or equal to 75 horsepower (56 kilowatt) and less than 175 horsepower (130 kilowatt).

If required, the permittee shall demonstrate compliance with the short-term emission limitations through performance tests conducted in accordance with the provisions in term f)(2) below.

Compliance with the annual PM ($PM_{10} + PM_{2.5}$) emission limitation (2.61E-4 ton/year, filterable) shall be determined by multiplying together the short-term emission limitation (0.015 gram PM ($PM_{10} + PM_{2.5}$)/bhp-hr) by horse power rating of the engine (158 HP) by the restricted hours of operation (100 hours/year) and by conversion factor (1 lb/454 grams) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the short-term emission limitation (0.015 gram PM ($PM_{10} + PM_{2.5}$)/bhp-hr), then the permittee will be in compliance with the annual emission limitation.

c. Emission Limitation:

NO_x emissions shall not exceed 0.30 gram/bhp-hr (0.40 gram/KW-hr) and 5.22E-3 ton/year.

Applicable Compliance Method:

Compliance with the emission limitation (0.30 gram NO_x/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than or equal to 75 horsepower (56 kilowatt) and less than 175 horsepower (130 kilowatt).

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

Compliance with the annual NO_x emission limitation (5.22E-3 ton/year) shall be determined by multiplying together the short-term emission limitation (0.30 gram NO_x/bhp-hr) by horse power rating of the engine (158 HP) by the restricted hours of operation (100 hours/year) and by conversion factor (1 lb/454 grams) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the short-

term emission limitation (0.30 gram NO_x/bhp-hr), then the permittee will be in compliance with the annual emission limitation.

d. Emission Limitation:

CO emissions shall not exceed 3.7 gram/bhp-hr (5.0 grams/kW-hr) and 6.44E-2 ton/year.

Applicable Compliance Method:

Compliance with the emission limitation shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than or equal to 75 horsepower (56 kilowatt) and less than 175 horsepower (130 kilowatt).

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

Compliance with the annual CO emission limitation (6.44E-2 ton/year) shall be determined by multiplying together the short-term emission limitation (3.7 gram CO/bhp-hr) by horse power rating of the engine (158 HP) by the restricted hours of operation (100 hours/year) and by conversion factor (1 lb/454 grams) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the short-term emission limitation (3.7 gram CO/bhp-hr), then the permittee will be in compliance with the annual emission limitation.

e. Sulfur Content Limitations for Diesel Fuel:

The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight.

Applicable Compliance Method:

Compliance shall be demonstrated through the record keeping requirements for the sulfur content of each shipment of diesel oil received. If meeting the standards in 40 CFR 80.510(c), this calculates to approximately 0.0015 lb SO₂/MMBtu.

f. Emission Limitation:

CO₂ emissions shall not exceed 521.6 gram/bhp-hr and 9.09 tons/year.

Applicable Compliance Method:

Compliance with the short-term emission limitation (521.6 grams/bhp-hr) shall be determined by the following equation:

$$E = A$$

where:

E = CO₂ emission rate, in grams of CO₂/bhp-hr;

A = emission factor, 521.6 grams of CO₂/bhp-hr (1.15 lb/hp-hr), AP-42 Section 3.3, Table 3.3-1, October 96.

Compliance with the annual CO₂ emission limitation (9.09 tons/year) shall be determined by multiplying together the short-term emission limitation (521.6 gram CO₂/bhp-hr) by horse power rating of the engine (158 HP) by the restricted hours of operation (100 hours/year) and by conversion factor (1 lb/454 grams) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the short-term emission limitation (521.6 gram CO₂/bhp-hr), then the permittee will be in compliance with the annual emission limitation.

- (2) If it is determined by the Ohio EPA that a compliance demonstration is required through performance testing, it shall be conducted using one of the following test methods or procedures:

- a. in accordance with 40 CFR 60.4212, conduct the exhaust emissions testing using the in-use testing procedures found in 40 CFR Part 1039, Subpart F, measuring the emissions of the regulated pollutants as specified in 40 CFR 1065.

g) Miscellaneous Requirements

- (1) None.

5. P008, Quenching & wastewater pretreatment

Operations, Property and/or Equipment Description:

Quenching & wastewater pretreatment, equipped with a flare and scrubber.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) d)(4).

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Flaring emissions:</p> <p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 5.0E-2 lb/hr (filterable and condensable) and 2.2E-1 ton per rolling, 12-month period.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 4.5E-1 lb/hr and 1.97 tons per rolling, 12-month period.</p> <p>Carbon monoxide (CO) emissions shall not exceed 2.05 lbs/hr and 8.97 tons per rolling, 12-month period.</p> <p>The flare is designed to meet a control efficiency of ninety-eight (98) percent for CO emissions.</p> <p>Carbon dioxide equivalent (CO_{2e}) emissions shall not exceed 777.46 lbs/hr and 3,405 tons per rolling, 12-month period.</p>

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the controlled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-17-11	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant to OAC rules 3745-31-10 through 20.
d.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
e.	OAC rule 3745-18-06(E)(2)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant to OAC rule 3745-31-05(F).
f.	OAC rule 3745-31-05(F)	<p>Flaring emissions:</p> <p>SO₂ emissions shall not exceed 2.0E-3 lb/hr and 1.0E-2 ton per rolling, 12-month period.</p> <p>Wastewater pretreatment, scrubber emissions:</p> <p>Ammonia (NH₃) emissions shall not exceed 2.64E-3 lb/hr and 1.2E-2 ton per rolling, 12-month period.</p>
g.	OAC rule 3745-110-03(K)(16) and (K)(20)	Exempt. See b)(2)a.
h.	OAC rule 3745-114-01	See d)(4).

(2) Additional Terms and Conditions

- a. The requirements of this rule do not apply since:
 - i. NO_x emissions are restricted to less than 25 tons per year; and
 - ii. the emissions unit is subject to a BACT limitation for NO_x.
- b. The permittee shall properly install, operate, and maintain a device to continuously monitor the flare's pilot flame when the emissions unit is in operation. The monitoring device and any recorder shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manuals.

c) Operational Restrictions

- (1) The flare shall be operated with a flame present at all times when gases are vented to it. The presence of the pilot flame shall be monitored using a thermocouple or other equivalent device to detect the presence of a flame.
- (2) The acceptable range or limit for the pressure drop across the NH₃ scrubber, the liquid flow rate, and the liquid pH shall be based upon the manufacturer's specifications until such time as any required performance testing is conducted and the appropriate range for each parameter is established to demonstrate compliance.

d) Monitoring and/or Recordkeeping Requirements

- (1) The permittee shall record all periods of time during which there is no pilot flame, or the flare is inoperable when the emissions unit is in operation and process gas is vented to the flare.
- (2) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop across the NH₃ scrubber (in inches of water), the NH₃ scrubber liquid flow rate (in gallons per minute), and the NH₃ scrubber liquid pH during operation of this emissions unit, including periods of startup and shutdown. The permittee shall record the pressure drop across the NH₃ scrubber and the NH₃ scrubber liquid's pH and flow rate on a once per shift basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee. The acceptable liquid flow rate, liquid pH and pressure drop across the NH₃ scrubber shall be based upon the manufacturer's specifications until such time as any required performance testing is conducted and the appropriate range for each parameter is established to demonstrate compliance.

Whenever the monitored value for any parameter deviates from the range(s) or minimum limit(s) established in accordance with this permit, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;

- b. the magnitude of the deviation at that time;
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the control equipment parameters within the acceptable range(s), or at or above the minimum limit(s) specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken:

- f. a description of the corrective action;
- g. the date the corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop, flow rate, and pH readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

- (3) These range(s) and/or limit(s) for the pressure drop, liquid flow rate, and pH are effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the appropriate Ohio EPA District Office or local air agency. The permittee may request revisions to the permitted range or limit for the pressure drop, liquid flow rate, or pH based upon information obtained during future performance tests that demonstrate compliance with the NH₃ emission rate for this emissions unit. In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.
- (4) Modeling to demonstrate compliance with the "Toxic Air Contaminant Statute", ORC 3704.03(F)(4)(b), was not necessary because the emissions unit's maximum annual emissions for each toxic air contaminant, as defined in OAC rule 3745-114-01, will be less than 1.0 ton per year. OAC Chapter 3745-31 requires a permittee to apply for and obtain a new or modified permit-to-install (PTI) prior to making a "modification" as defined by OAC rule 3745-31-01. The permittee is hereby advised that changes in the composition of the materials, or use of new materials, that would cause the emissions of any toxic air

contaminant to increase to above 1.0 ton per year may require the permittee to apply for and obtain a new PTI.

- (5) The permittee shall record and maintain the following records each month for this emissions unit:
- a. the operating hours of the flare, in hours/month;
 - b. the operating hours of flare, in hours/12-month rolling period; and
 - c. the emission rates, in tons/12-month rolling period, using the compliance methods in f)(1)a. through f)(1)d. for PM₁₀ and PM_{2.5} (filterable and condensable), NO_x, CO and GHGs.

e) Reporting Requirements

- (1) The permittee shall submit quarterly deviation reports that identify all periods of time during which there was no pilot flame, or the flare was inoperable when the emissions unit was in operation and process gas was vented to the flare. The reports shall include the date, time, and duration of each such period.
- (2) The permittee shall submit quarterly deviation (excursion) reports that identify the following:
- a. each period of time (start time and date, and end time and date) when the pressure drop across the NH₃ scrubber, the liquid flow rate, or the liquid pH was outside of the appropriate range or limit specified by the manufacturer and/or outside of the acceptable range for each parameter following any required compliance demonstration; and
 - b. any period of time (start time and date, and end time and date) when the emissions unit was in operation and the process emissions were not vented to the NH₃ scrubber.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitations (flaring emissions):

PM₁₀ and PM_{2.5} emissions shall not exceed 5.0E-2 lb/hr (filterable and condensable) and 2.2E-1 ton per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A * B$$

where:

E = PM₁₀/PM_{2.5} emission rate, in lb/hr;
A = emission factor, 7.45E-03 lb of PE/PM₁₀/MMBtu, AP-42 Section 1.4, July 98
(filterable and condensable); and
B = 6.61 MMBtu/hr, heat input.

Compliance with the annual PM₁₀ and PM_{2.5} emission limitation (2.2E-1 ton per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 5.0E-2 lb/hr by operating hours of the flare (hours/12-month, rolling period), as recorded in d)(5) and then dividing by 2,000 lbs/ton.

b. Emission Limitations (flaring emissions):

NO_x emissions shall not exceed 4.5E-1 lb/hr and 1.97 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A \cdot B$$

where:

E = NO_x emission rate, in lb/hr;
A = emission factor, 6.80E-02 lb of NO_x/MMBtu, AP-42 Section 13.5, December 16; and
B = 6.61 MMBtu/hr, heat input.

Compliance with the annual NO_x emissions limitation (1.97 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 4.5E-1 lb/hr by the operating hours of the flare (hours/12-month rolling period), as recorded in d)(5) and then dividing by 2,000 lbs/ton.

c. Emission Limitations (flaring emissions):

CO emissions shall not exceed 2.05 lbs/hr and 8.97 tons per rolling, 12-month period.

The flare is designed to meet a control efficiency of ninety-eight (98) percent for CO emissions.

Applicable Compliance Methods:

The control efficiency was established based on the information provided by the permittee in permit application #A0064851.

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A \cdot B$$

where:

E = CO emission rate, in lb/hr;

A = emission factor, $3.10\text{E-}01$ lb of CO/MMBtu, AP-42 Section 13.5, December 16;
and

B = 6.61 MMBtu/hr, heat input.

Compliance with the annual CO emissions limitation (8.97 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 2.05 lbs/hr by the operating hours of the flare (hours/12-month rolling period), as recorded in d)(5) and then dividing by 2,000 lbs/ton.

d. Emission Limitations (flaring emissions):

CO_{2e} emissions shall not exceed 777.46 lbs/hr and 3,405 tons per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A \cdot B$$

where:

E = CO_{2e} emission rate, in lbs/hr;

A = emission factor, $1.176\text{E+}02$ lbs of CO_{2e}/MMBtu, AP-42 Section 1.4, July 98;
and

B = 6.61 MMBtu/hr, heat input.

Compliance with the annual CO_{2e} emissions limitation (3,405 tons per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 777.46 lbs/hr by the operating hours (hours/12-month rolling period), as recorded in d)(5) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emissions limitation, then the permittee will be in compliance with the annual emissions limitation.

e. Emission Limitation (flaring emissions):

SO₂ emissions shall not exceed $2.0\text{E-}3$ lb/hr and $1.0\text{E-}2$ ton per rolling, 12-month period.

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equations:

$$E = A \cdot B$$

where:

E = SO₂ emission rate, in lb/hr;

A = emission factor, 2.37E-04 lb of SO₂/MMBtu, EF developed by the equipment manufacturer, based on a mass balance of gas sulfur contents, as provided in permit application #A0064851; and

B = 6.61 MMBtu/hr, heat input.

Compliance with the annual SO₂ emissions limitation (1.0E-2 ton per rolling 12-month period) shall be determined by multiplying the maximum hourly allowable emissions limitation of 2.0E-3 lb/hr by the maximum number of hours in a 12-month rolling period (8,760 hr/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emissions limitation, then the permittee will be in compliance with the annual emissions limitation.

f. Emission Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

g. Emission Limitations (NH₃ scrubber):

NH₃ emissions shall not exceed 2.64E-3 lb/hr and 1.2E-2 ton per rolling, 12-month period.

Applicable Compliance Methods:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = [A/B] \cdot [C/D] \cdot F$$

where:

E = NH₃ emission rate, in lbs/hr;

A = concentration, 1 ppmv from manufacturer design;

B = 1,000,000 parts;
C = 17.03 lb/lb-mol, molecular weight of NH_3 ;
D = 385.4 number of cubic feet in a pound-mole of gas at standard temperature and pressure; and
F = 60,000 scf/hr, volumetric flowrate of scrubber in standard cubic feet.

Compliance with the annual NH_3 emission limitation ($1.2\text{E-}2$ ton per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of $2.64\text{E-}3$ lb/hr by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

If required, the permittee shall demonstrate compliance with this NH_3 emission limitation through emission tests performed in accordance with the procedures specified in US EPA conditional test method CTM-027, October 1997.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

g) Miscellaneous Requirements

(1) None.

6. P901, EAF

Operations, Property and/or Equipment Description:

Electric Arc Furnace, including DRI loading, smelting, tapping, pouring, and casting.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) d)(4).

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rules 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀), including filterable and condensable, shall not exceed 2.5E-3 gr/dscf, 12.43 lbs/hr and 54.44 tons per rolling, 12-month period.</p> <p>The baghouse shall be designed to meet an outlet concentration of 2.5E-3 gr/dscf of PM₁₀.</p> <p>Particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}), including filterable and condensable, shall not exceed 2.0E-3 gr/dscf, 9.94 lbs/hr and 43.55 tons per rolling, 12-month period.</p> <p>The baghouse shall be designed to meet an outlet concentration of 2.0E-3 gr/dscf of PM_{2.5}.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 1.4 lbs/ton of MPI produced.</p> <p>Carbon monoxide (CO) emissions shall not exceed 1.8 lbs/ton of MPI produced.</p>

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		<p>Carbon dioxide equivalent (CO_{2e}) emissions shall not exceed 186.41 lbs/ton of MPI produced.</p> <p>Visible particulate emissions from any stack serving this emissions unit shall not exceed three (3) percent opacity as a 6-minute average.</p> <p>Visible emissions of fugitive dust from this emissions unit shall not exceed six (6) percent opacity as a 6-minute average.</p> <p>See b)(2)a. and b)(2)b.</p>
b.	ORC 3704.03(T) and OAC rule 3745-31-05(A)(3)	The Best Available Technology (BAT) requirements established pursuant to ORC rule 3704.03(T) and OAC rule 3745-31-05(A)(3) have been determined to be equivalent to OAC rules 3745-31-10 through 20 for PM ₁₀ , PM _{2.5} , NO _x and CO.
c.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
d.	OAC rule 3745-17-07(B)(3)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.
e.	OAC rule 3745-17-07(B)(1)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.
f.	OAC rule 3745-17-11	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.
g.	OAC rule 3745-17-07(A)(1)	The emission limitation specified by this rule is less stringent than the emission

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		limitation established pursuant OAC rules 3745-31-10 through 20.
h.	OAC rule 3745-114-01	See d)(4).

(2) Additional Terms and Conditions

- a. In the event, the permittee does not demonstrate compliance by meeting the limit(s) of 2.5E-3 gr/dscf, 12.43 lbs/hr for PM₁₀ emissions, 2.0E-3 gr/dscf, 9.94 lbs/hr for PM_{2.5} emissions, 1.4 lbs/ton of MPI produced for NO_x emissions and 1.8 lbs/ton of MPI produced for CO emissions through initial performance testing as specified in sections f)(1)a and f)(2), then the permittee shall re-evaluate BACT and re-submit a permit modification along with supportive documentation to the Ohio EPA for this emissions unit within 60 days at the completion of the tests.
- b. The emissions from this emissions unit shall be vented to the EAF baghouse at all times the emissions unit is in operation.
- c) Operational Restrictions
 - (1) None.
- d) Monitoring and/or Recordkeeping Requirements
 - (1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible particulate emissions from the stack (EAF baghouse egress) and for any visible emissions of fugitive dust from the egress points (i.e., EAF building, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:
 - a. the location and color of the emissions;
 - b. whether the emissions are representative of normal operations;
 - c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
 - d. the total duration of any visible emissions incident; and
 - e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emissions incident has occurred. The observer does not have to document the exact start and end times for the visible emissions incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emissions incident was continuous during the observation

period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations or specify the minor corrective actions that were taken to ensure that the emissions unit continued to operate under normal conditions or specify the corrective actions that were taken to eliminate abnormal visible emissions.

- (2) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across each baghouse when the controlled emissions unit(s) is/are in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across each baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee. The acceptable pressure drop for each baghouse shall be based upon the manufacturer's specifications until such time as any required performance testing is conducted and the appropriate range is established to demonstrate compliance.

Whenever any of the monitored values for pressure drop deviates from the limit(s) or range(s) established in accordance with this permit for screen building baghouse or EAF baghouse, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time;
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken:

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and

- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

- (3) This range or limit on the pressure drop across the baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the appropriate Ohio EPA District Office or local air agency. The permittee may request revisions to the permitted limit or range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit(s). In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification
- (4) Modeling to demonstrate compliance with, the "Toxic Air Contaminant Statute", ORC 3704.03(F)(4)(b), was not necessary because the emissions unit's maximum annual emissions for each toxic air contaminant, as defined in OAC rule 3745-114-01, will be less than 1.0 ton per year. OAC Chapter 3745-31 requires a permittee to apply for and obtain a new or modified permit-to-install prior to making a "modification" as defined by OAC rule 3745-31-01. The permittee is hereby advised that changes in the composition of the materials, or use of new materials, that would cause the emissions of any toxic air contaminant to increase to above 1.0 ton per year may require the permittee to apply for and obtain a new permit-to-install.

e) Reporting Requirements

- (1) The permittee shall submit semiannual written reports that identify:
- a. all days during which any visible particulate emissions were observed from any stack (EAF baghouse egress) serving this emissions unit;
 - b. all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., EAF building) serving this emissions unit; and
 - c. any corrective actions taken to minimize or eliminate the visible particulate emissions from the stack and/or visible emissions of fugitive dust.

These reports shall be submitted to the Director (the appropriate Ohio EPA District Office or local air agency) by January 31 and July 31 of each year and shall cover the previous 6-month period.

- (2) The permittee shall submit quarterly deviation (excursion) reports that identify the following:
- a. each period of time (start time and date, and end time and date) when the pressure drop across each baghouse (EAF baghouse) was outside of the range specified by the manufacturer and outside of the acceptable range following any required compliance demonstration;

- b. any period of time (start time and date, and end time and date) when the emissions unit(s) was/were in operation and the process emissions were not vented to the baghouse;
- c. each incident of deviation described in "a" or "b" (above) where a prompt investigation was not conducted;
- d. each incident of deviation described in "a" or "b" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
- e. each incident of deviation described in "a" or "b" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.

The quarterly deviation (excursion) reports shall be submitted in accordance with the reporting requirements of the Standard Terms and Conditions of this permit.

- (3) Unless other arrangements have been approved by the Director, all notifications and reports shall be submitted through the Ohio EPA's eBusiness Center: Air Services online web portal.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

- a. Emission Limitations:

PM₁₀ emissions shall not exceed 2.5E-3 gr/dscf and 12.43 lbs/hr.

PM_{2.5} emissions shall not exceed 2.0E-3 gr/dscf and 9.94 lbs/hr.

NO_x emissions shall not exceed 1.4 lbs/ton of MPI produced.

CO emissions shall not exceed 1.8 lbs/ton of MPI produced.

CO_{2e} emissions shall not exceed 186.41 lbs/ton of MPI produced.

Applicable Compliance Method:

The permittee shall demonstrate compliance with the emission limitations through performance tests conducted in accordance with the provisions in term f)(2) below.

- b. Emission Limitation:

PM₁₀ emissions shall not exceed 54.44 tons per rolling, 12-month period.

PM_{2.5} emissions shall not exceed 43.55 tons per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the annual emission limitation(s) (ton per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation(s) (lbs/hr) by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation for each pollutant through performance testing as required in terms f)(1)a. and f)(2), then the permittee will be in compliance with each annual emission limitation.

c. Emission Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed three (3) percent opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

d. Emission Limitation:

Visible emissions of fugitive dust from this emissions unit shall not exceed six (6) percent opacity as a 6-minute average.

Applicable Compliance Method:

If required, compliance with the visible particulate emission limitation for fugitive dust shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(3).

(2) The permittee shall conduct, or have conducted, emission testing for this emissions unit in accordance with the following requirements:

- a. The emission testing shall be conducted within 6-months after startup of the EAF, emissions unit P901.
- b. The emission testing shall be conducted to demonstrate compliance with the allowable PM₁₀, PM_{2.5}, NO_x, CO and CO₂ emission limitations.
- c. The following test method(s) shall be employed to demonstrate compliance with the allowable emission limitations:

for PM₁₀: Method 201 or 201A and 202 of 40 CFR Part 51, Appendix M;

for PM_{2.5}: Method 201A and 202 of 40 CFR Part 51, Appendix M;

for NO_x: Methods 7 or 7E of 40 CFR Part 60, Appendix A;

for CO: Method 10 of 40 CFR Part 60, Appendix A;

for CO₂: Method 3A of 40 CFR Part 60, Appendix A; and

Methods 1 through 4 of 40 CFR Part 60, Appendix A.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

- d. A record of pressure drop values across each baghouse shall be maintained during the emission test in order to verify manufacturer's recommended pressure drop range or to revise and establish an acceptable pressure drop range. Data shall be recorded at 15-minute increments or less throughout the entire test while sampling.
- e. A record of merchant pig iron produced for each heat shall be maintained during the emission test in order to calculate emissions rates, in units of *pounds of a pollutant per ton MPI produced*.
- f. During the emission testing, the emissions unit shall be operated under operational conditions approved in advance by the Ohio EPA Northeast District Office. Operational conditions that may need to be approved include, but are not limited to, the production rate, the type of material processed, material make-up (solvent content, etc.), or control equipment operational limitations (burner temperature, precipitator voltage, etc.). In general, testing shall be done under "worst case" conditions expected during the life of the permit. As part of the information provided in the "Intent to Test" notification form described below, the permittee shall provide a description of the emissions unit operational conditions they will meet during the emissions testing and describe why they believe "worst case" operating conditions will be met. Prior to conducting the test(s), the permittee shall confirm with the Ohio EPA Northeast District Office that the proposed operating conditions constitute "worst case". Failure to test under the approved conditions may result in Ohio EPA not accepting the test results as a demonstration of compliance.
- g. Not later than 30 days prior to the proposed test date(s), the permittee shall submit an "Intent to Test" notification to the Ohio EPA Northeast District Office. The "Intent to Test" notification shall describe in detail the proposed test methods and procedures, the emissions unit operating parameters, the time(s) and date(s) of the test(s), and the person(s) who will be conducting the test(s). Failure to submit such notification for review and approval prior to the test(s) may result in the Ohio EPA Northeast District Office's refusal to accept the results of the emission test(s).
- h. Personnel from the Ohio EPA Northeast District Office shall be permitted to witness the test(s), examine the testing equipment, and acquire data and information necessary to ensure that the operation of the emissions unit and the testing procedures provide a valid characterization of the emissions from the emissions unit and/or the performance of the control equipment.
- i. A comprehensive written report on the results of the emissions test(s) shall be signed by the person or persons responsible for the tests and submitted to the Ohio EPA Northeast District Office within 30 days following completion of the test(s). The permittee may request additional time for the submittal of the written report, where warranted, with prior approval from the Ohio EPA Northeast District Office.

Final Permit-to-Install
Petmin USA Incorporated
Permit Number: P0127678
Facility ID: 0204012023
Effective Date: 07/17/2020

g) Miscellaneous Requirements

(1) None.

7. P902, Material Handling

Operations, Property and/or Equipment Description:

Raw materials handling, including screening and transfer via conveyor system.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only.

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rules 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Outdoor conveyor transfer:</p> <p>5.6E-1 ton/year of fugitive particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀)</p> <p>1.6E-1 ton/year of fugitive particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5})</p> <p>See b)(2)a.</p> <p>Indoor primary screening and conveyor transfer:</p> <p>PM₁₀/PM_{2.5} emissions from the stack(s) serving this emissions unit shall not exceed 2.5E-3 gr/dscf, 1.7E-1 lb/hr and 7.3E-1 ton per rolling, 12-month period for indoor material handling operations.</p> <p>The baghouse shall be designed to meet an outlet concentration of 2.5E-3 gr/dscf of PM₁₀/PM_{2.5}.</p> <p>Visible particulate emissions from any stack serving this emissions unit shall not exceed three (3) percent opacity as a 6-minute average.</p>

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		See b)(2)b.
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ or PM _{2.5} emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-17-07(B)(1)	Visible emissions of fugitive dust from this emissions unit shall not exceed twenty (20) percent opacity as a three-minute average.
d.	OAC rule 3745-17-08(B)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.
e.	OAC rule 3745-17-07(A)(1)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.
f.	OAC rule 3745-17-11(B)	The emission limitation specified by this rule is less stringent than the emission limitation established pursuant OAC rules 3745-31-10 through 20.

(2) Additional Terms and Conditions

- a. The following material handling operations for this emissions unit are subject to OAC rules 3745-17-07(B)(1), 3745-17-08(B) and 3745-31-10 through 20:
 - i. outdoor material transfer by conveyors; and
 - ii. outdoor material transfer at conveyor to conveyor transfer points.
- b. The following material handling operations for this emissions unit are subject to OAC rules 3745-17-07(A)(1), 3745-17-11, 3745-17-07(B)(1) and 3745-31-10 through 20 (for the baghouse emissions).
 - i. indoor materials screening;
 - ii. indoor material transfer by conveyors; and
 - iii. indoor material transfer at conveyor to conveyor transfer points.

The emissions from the above material handling operations from this emissions unit shall be vented to the baghouse(s) at all times the emissions unit is in operation.

c) Operational Restrictions

(1) None.

d) Monitoring and/or Recordkeeping Requirements

(1) The permittee shall perform daily checks, when the emissions unit is in operation and when the weather conditions allow, for any visible particulate emissions from each stack (screen building baghouse egress) and for any visible emissions of fugitive dust from the egress points (i.e., outdoor conveyors and transfer points, screen building, etc.) serving this emissions unit. The presence or absence of any visible emissions shall be noted in an operations log. If visible emissions are observed, the permittee shall also note the following in the operations log:

- a. the location and color of the emissions;
- b. whether the emissions are representative of normal operations;
- c. if the emissions are not representative of normal operations, the cause of the abnormal emissions;
- d. the total duration of any visible emissions incident; and
- e. any corrective actions taken to minimize or eliminate the visible emissions.

If visible emissions are present, a visible emissions incident has occurred. The observer does not have to document the exact start and end times for the visible emissions incident under item (d) above or continue the daily check until the incident has ended. The observer may indicate that the visible emissions incident was continuous during the observation period (or, if known, continuous during the operation of the emissions unit). With respect to the documentation of corrective actions, the observer may indicate that no corrective actions were taken if the visible emissions were representative of normal operations or specify the minor corrective actions that were taken to ensure that the emissions unit continued to operate under normal conditions or specify the corrective actions that were taken to eliminate abnormal visible emissions.

(2) The permittee shall properly install, operate, and maintain equipment to continuously monitor the pressure drop, in inches of water, across each baghouse when the controlled emissions unit(s) is/are in operation, including periods of startup and shutdown. The permittee shall record the pressure drop across each baghouse on a daily basis. The monitoring equipment shall be installed, calibrated, operated, and maintained in accordance with the manufacturer's recommendations, instructions, and operating manual(s), with any modifications deemed necessary by the permittee. The acceptable pressure drop for the baghouse shall be based upon the manufacturer's specifications

until such time as any required performance testing is conducted and the appropriate range is established to demonstrate compliance.

Whenever any of the monitored values for pressure drop deviates from the limit(s) or range(s) established in accordance with this permit for the screen building baghouse, the permittee shall promptly investigate the cause of the deviation. The permittee shall maintain records of the following information for each investigation:

- a. the date and time the deviation began;
- b. the magnitude of the deviation at that time;
- c. the date the investigation was conducted;
- d. the name(s) of the personnel who conducted the investigation; and
- e. the findings and recommendations.

In response to each required investigation to determine the cause of a deviation, the permittee shall take prompt corrective action to bring the operation of the control equipment within the acceptable range specified in this permit, unless the permittee determines that corrective action is not necessary and documents the reasons for that determination and the date and time the deviation ended. The permittee shall maintain records of the following information for each corrective action taken:

- f. a description of the corrective action;
- g. the date corrective action was completed;
- h. the date and time the deviation ended;
- i. the total period of time (in minutes) during which there was a deviation;
- j. the pressure drop readings immediately after the corrective action was implemented; and
- k. the name(s) of the personnel who performed the work.

Investigation and records required by this paragraph do not eliminate the need to comply with the requirements of OAC rule 3745-15-06 if it is determined that a malfunction has occurred.

This range or limit on the pressure drop across each baghouse is effective for the duration of this permit, unless revisions are requested by the permittee and approved in writing by the appropriate Ohio EPA District Office or local air agency. The permittee may request revisions to the permitted limit or range for the pressure drop based upon information obtained during future testing that demonstrate compliance with the allowable particulate emission rate for the controlled emissions unit(s). In addition, approved revisions to the range or limit will not constitute a relaxation of the monitoring requirements of this permit and may be incorporated into this permit by means of an administrative modification.

e) Reporting Requirements

(1) The permittee shall submit semiannual written reports that identify:

- a. all days during which any visible particulate emissions were observed from any stack (screen building baghouse egress) serving this emissions unit;
- b. all days during which any visible emissions of fugitive dust were observed from the egress points (i.e., outdoor conveyors and transfer points, screen building, etc.) serving this emissions unit; and
- c. any corrective actions taken to minimize or eliminate the visible particulate emissions from the stack and/or visible emissions of fugitive dust.

These reports shall be submitted to the Director (the appropriate Ohio EPA District Office or local air agency) by January 31 and July 31 of each year and shall cover the previous 6-month period.

(2) The permittee shall submit quarterly deviation (excursion) reports that identify the following:

- a. each period of time (start time and date, and end time and date) when the pressure drop across each baghouse (screen building baghouse baghouse) was outside of the range specified by the manufacturer and outside of the acceptable range following any required compliance demonstration;
- b. any period of time (start time and date, and end time and date) when the emissions unit(s) was/were in operation and the process emissions were not vented to the baghouse;
- c. each incident of deviation described in "a" or "b" (above) where a prompt investigation was not conducted;
- d. each incident of deviation described in "a" or "b" where prompt corrective action, that would bring the pressure drop into compliance with the acceptable range, was determined to be necessary and was not taken; and
- e. each incident of deviation described in "a" or "b" where proper records were not maintained for the investigation and/or the corrective action(s), as identified in the monitoring and record keeping requirements of this permit.

The quarterly deviation (excursion) reports shall be submitted in accordance with the reporting requirements of the Standard Terms and Conditions of this permit.

(3) Unless other arrangements have been approved by the Director, all notifications and reports shall be submitted through the Ohio EPA's eBusiness Center: Air Services online web portal.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitations (outdoor material handling operations):

Fugitive PM₁₀ emissions shall not exceed 5.6E-1 ton/year.

Fugitive PM_{2.5} emissions shall not exceed 1.6E-1 ton/year.

Applicable Compliance Method:

Compliance shall be determined by the following equation:

$$E = A*B*C*(1/D)*(1 - CE/100)$$

where:

E = PM₁₀ and PM_{2.5} emission rates, in tons/year;

A = emission factors: 1.10E-03 lb/ton of PM₁₀, 3.11E-04 lb/ton of PM_{2.5}, AP-42 Section 11.19.2, August 04 (conveyor transfer points);

B = maximum 12-month rolling throughput, in tons/year, 850,000 tons/year;

C = number of transfer points: 9;

D = 2,000 lbs/ton; and

CE = control efficiency for the application of water, 80% (RACM).

Repeat this equation for each pollutant: PM₁₀ and PM_{2.5}.

b. Emission Limitations (indoor primary screening and conveyor transfer):

PM₁₀/PM_{2.5} emissions from the stack(s) serving this emissions unit shall not exceed 2.5E-3 gr/dscf, 1.7E-1 lb/hr and 7.3E-1 ton per rolling, 12-month period for indoor material handling operations.

Applicable Compliance Method:

Compliance shall be determined by the following equation:

$$E = (A*B*C*D)$$

where:

E = PM₁₀/PM_{2.5} emission rates, in lbs/hr;

A = baghouse outlet limit (vendor guarantee): 2.5E-3 gr/dscf of PM₁₀/PM_{2.5};

B = baghouse flowrate, 7,800 scfm;

C = conversion, 60 minutes/hr; and

D = conversion, 1 pound/7,000 grains.

Compliance with the annual $PM_{10}/PM_{2.5}$ emission limitation ($7.3E-1$ ton per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of $1.7E-1$ lb/hr by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

If required, the permittee shall demonstrate compliance with these emission limitations through emission tests performed in accordance with the following methods:

for PM_{10} : Method 201 or 201A and 202 of 40 CFR Part 51, Appendix M; and
for $PM_{2.5}$: Method 201A and 202 of 40 CFR Part 51, Appendix M.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

c. Emission Limitation:

Visible emissions of fugitive dust from this emissions unit shall not exceed twenty (20) percent opacity as a three-minute average.

Applicable Compliance Method:

If required, compliance with the visible particulate emission limitation for fugitive dust shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9 and OAC rule 3745-17-03(B)(3).

d. Emission Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed three (3) percent opacity as a six-minute average, except as provided by rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

g) Miscellaneous Requirements

(1) None.

8. Emissions Unit Group - Emergency Fire Pumps: P009 and P010

EU ID	Operations, Property and/or Equipment Description
P009	Diesel-fired emergency fire pump (high pressure)
P010	Diesel-fired emergency fire pump (low Pressure)

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only:

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 0.15 gram/bhp-hr (filterable).</p> <p>Nitrogen oxides (NO_x) and non-methane hydrocarbons (NMHC) emissions shall not exceed 3.0 gram/bhp-hr.</p> <p>Carbon monoxide (CO) emissions shall not exceed 2.6 gram/bhp-hr.</p> <p>Carbon dioxide (CO₂) emissions shall not exceed 521.6 gram/bhp-hr.</p>
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
c.	40 CFR Part 60, Subpart IIII Tier II Standards	The emission limitation for PM, NO _x + NMHC, CO specified by this rule are equivalent to the emission limitations established under OAC rule 3745-31-10 through 20.
d.	40 CFR 60.4207(b) 40 CFR 80.510(b)	The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight. See terms b)(2)d, c)(2), d)(1), and e)(1)a.
e.	40 CFR Part 60, Subpart A (40 CFR 60.1 - 60.19)	Table 8 to Subpart IIII of 40 CFR Part 60 – Applicability of General Provisions to Subpart IIII shows which parts of the General Provisions in 40 CFR 60.1 - 60.19 apply.
f.	40 CFR Part 63, Subpart ZZZZ	A new area source operating in compliance with 40 CFR Part 60, Subpart IIII is the demonstration of compliance for 40 CFR Part 63, Subpart ZZZZ.
g.	OAC rule 3745-17-11(B)(5)(a)	Particulate emissions shall not exceed 0.310 lb/MMBtu of actual heat input. The emission limitation specified by this rule is less stringent than the emission limitation established under OAC rule 3745-31-10 through 20.
h.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
i.	OAC rule 3745-18-06(B)	Exemption due to having a maximum heat input less than 10 MMBtu/hr.
j.	OAC rule 3745-110-03(K)(16) and (K)(20)	Exempt. See b)(2)f.

(2) Additional Terms and Conditions

- a. The application and enforcement of the provisions of the New Source Performance Standards (NSPS), as promulgated by the United States Environmental Protection Agency (U.S. EPA), 40 CFR Part 60, are delegated to the Ohio Environmental Protection Agency (Ohio EPA).
- b. The fire pump stationary compression ignition (CI) internal combustion engine (ICE) is subject to and shall be operated in compliance with the requirements of 40 CFR Part 60, Subpart IIII, the standards of performance for stationary CI ICE.
- c. The fire pump stationary CI ICE has been or shall be purchased certified by the manufacturer, for its useful life*, to emission standards as stringent as those identified in 40 CFR 60.4205(c) and 40 CFR 60.4202(d) and found in Table 4 to Subpart IIII, for engines of the same model year and National Fire Protection Association (NFPA) nameplate power.
- d. The quality of the diesel fuel burned in this emissions unit shall meet the following specifications on an "as received" basis:
 - i. a sulfur content which is sufficient to comply with the allowable sulfur dioxide emission limitation of 0.0015 pound sulfur dioxide/MMBtu actual heat input; and 15 ppm sulfur or 0.0015% sulfur by weight; and
 - ii. a minimum cetane index of 40 or a maximum aromatic content of 35 volume percent.

Compliance with the above-mentioned specifications shall be determined by purchase orders specifying that each shipment of oil received is ULSD compliant.
- e. The emergency stationary ICE shall meet the following criteria, as applicable:
 - i. The stationary ICE shall be operated to provide electrical power or mechanical work during an emergency situation, to include power for critical networks or equipment at the facility when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or where the stationary ICE is used to pump water for a fire or flood, etc.;
 - ii. The stationary ICE may be operated under limited circumstances for emergency demand response or periods where there is a deviation of voltage or frequency of 5% or more above the standard and as specified in 40 CFR 60.4211(f); and
 - iii. The stationary ICE may operate as part of a financial arrangement with another entity in situations as allowed in 40 CFR 60.4211(f)(2)(ii) or (iii) and 40 CFR 60.4211(f)(3)(i).

The emergency stationary ICE must comply with the applicable requirements specified in 40 CFR 60.4211(f) in order to be considered emergency stationary ICE under 40 CFR Part 60, Subpart IIII.

f. The requirements of this rule do not apply since:

i. the emissions unit is subject to a BACT limitation for NO_x.

c) Operational Restrictions

- (1) The fire pump stationary CI ICE and any control device shall be installed, operated, and maintained according to the manufacturer's emission-related written instructions and the permittee shall only change those emission-related settings that are allowed by the manufacturer. The CI ICE must also be installed and operated to meet the applicable requirements from 40 CFR Part 89, Control of Emissions from New and In-use Non-road CI ICE; and Part 1068, the General Compliance Provisions for Engine Programs. The permittee shall operate and maintain the stationary CI ICE to achieve the emissions standards established in 40 CFR 60.4205 over the entire life of the engine(s).
- (2) Diesel fuel burned in the CI, ICE shall not exceed the limit for sulfur as specified by 40 CFR 80.510(c), i.e., the maximum sulfur content of diesel fuel shall not exceed 15 ppm or 0.0015% sulfur by weight.
- (3) The permittee shall install a non-resettable hour meter prior to startup of the engine. Non-emergency situations, maintenance checks and readiness testing of the emergency ICE shall be limited to 100 hours per year; however, there is no time limit on operations during emergency situations. The permittee may petition the Director for approval of additional hours for maintenance checks and readiness testing. Any operation of the emergency ICE during anything other than emergency situations, non-emergency situations for 50 hours per year as described in c)(4) and maintenance or readiness testing is prohibited.
- (4) The emergency stationary ICE must be operated according to the following requirements in order to be considered an emergency stationary ICE under 40 CFR Part 60, Subpart IIII, otherwise it shall meet all of the requirements for non-emergency engines.
 - a. The emergency stationary ICE may be used at the facility in emergency situations with no restriction on time.
 - b. The emergency stationary ICE may be operated for any combination of the following purposes for a maximum of 100 hours per calendar year:
 - i. The emergency stationary ICE may be used at the facility in non-emergency situations for 50 hours per year but cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial agreement except where meeting all of the conditions identified in 40 CFR 60.4211(f)(3)(i).
 - ii. The emergency stationary ICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by federal,

state, or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. Maintenance and testing of the emergency ICE may exceed 100 hours per calendar year, if the permittee maintains records indicating that federal, state, or local standards require the additional hours or the permittee may petition the Director for approval of additional hours for maintenance checks and readiness testing.

- iii. The emergency stationary ICE may be operated for emergency demand response for periods during which the Reliability Coordinator under the North American Electric Reliability Corporation (NERC) Reliability Standard EOP-002-3, Capacity and Energy Emergencies (incorporated by reference, 40 CFR 60.17), or other authorized entity (as determined by the Reliability Coordinator), has declared an Energy Emergency Alert Level 2, as defined in the NERC Reliability Standard EOP-002-3.
- iv. The emergency stationary ICE may be operated for periods where there is a deviation of voltage or frequency of 5% or greater below standard voltage or frequency.

In order to qualify for the emergency standards, the permittee shall only operate the emergency stationary RICE during emergencies, for maintenance and testing, for emergency demand response, for 50 hours per year for non-emergencies situations, and as allowed in 40 CFR 60.4211(f).

d) **Monitoring and/or Recordkeeping Requirements**

- (1) For each shipment of oil received for burning in this emissions unit, the permittee shall maintain records of each purchase order that identifies the total quantity of diesel oil received and a specification that each shipment of oil received is compliant with b)(2)d. These records shall be retained for a minimum of 5 years and shall be available for inspection by the Director or his/her representative.
- (2) The permittee shall maintain the manufacturer's certification, to the applicable Tier 2 emission standards in Table 1 of 40 CFR 89.112 or Tier emission standards equivalent or more stringent than emission standards in Table 1 of 40 CFR 89.112, on site or at a central location for all facility ICE and it shall be made available for review upon request. If the manufacturer's certification is not kept on site, the permittee shall maintain a log for the location of each ICE and it shall identify the agency-assigned emissions unit number, the manufacturer's identification number, and the identification number of the certificate. The manufacturer's operations manual and any written instructions or procedures developed by the permittee and approved by the manufacturer shall be maintained at the same location as the ICE.
- (3) The permittee shall maintain records or a log for the operation of the engine in emergency and non-emergency service, as recorded through the non-resettable hour meter. The permittee shall keep the following information for the emergency CI stationary ICE:

- a. the number of hours the engine is in operation, recorded through the non-resettable hour meter;
 - b. the number of hours spent in emergency operation;
 - c. the number of hours spent in non-emergency operation;
 - d. the number of hours in maintenance checks and readiness testing; and
 - e. what classified the operation as an emergency.
- (4) If the engine is used for emergency response demand, for periods of deviation of voltage or frequency, or as part of a financial arrangement with another entity, as specified in 40 CFR 60.4211(f)(2)(ii) or (iii) or 40 CFR 60.4211(f)(3), the permittee must keep records of:
- a. the notification of the emergency situation;
 - b. the date(s) of each emergency situation; and
 - c. the start time and end time of engine operation for these purposes.
- e) Reporting Requirements
- (1) The permittee shall submit a quarterly deviation report identifying the following:
- a. any period of time (date and number of hours) that the quality of oil burned in this emissions unit did not meet the requirements established in 40 CFR 80.510(c), based upon the required fuel records; and the amount of non-compliant fuel burned on each such occasion; and
 - b. any exceedance of the annual 100-hour (or otherwise approved for additional hours) limitation on maintenance checks and readiness testing, as documented by the non-resettable hour meter and operations log.
- (2) The permittee shall submit an annual report, including the information identified in 40 CFR 60.4214(d) for each emergency stationary ICE that is employed for one of the following purposes:
- a. operates or is contractually obligated to have the engine(s) available for more than 15 hours per calendar year for emergency demand response or to supply power during periods where there is a deviation of voltage or frequency of 5% or more below the standard voltage or frequency; or
 - b. operates the engine(s) in non-emergency situations as identified in 40 CFR 60.4211(f)(3), including the supply of power as part of a financial agreement with another entity, where these conditions can be met.
- (3) The annual report required by 40 CFR 60.4214(d) must contain the following information:
- a. the company name and address where the engine is located;

- b. the date of the report and beginning and ending dates of the reporting period;
- c. the engine horse power and model year;
- d. the latitude and longitude of the engine in decimal degrees reported to the fifth decimal place;
- e. the number of hours of operation in emergency and non-emergency service, including the time of operations for maintenance checks and readiness testing, as recorded by the non-resettable hour meter;
- f. the hours of operation for the purposes of emergency demand response, including the date, start time, and end time;
- g. the hours of operation for the purposes of supplying power during periods where there was a deviation of voltage or frequency of 5% or greater below standard voltage or frequency, including the date, start time, and end time;
- h. the number of hours the engine is contractually obligated to be available for the purposes of emergency demand response or deviations from normal voltage or frequency, as specified in 40 CFR 60.4211(f)(2)(ii) and (iii);
- i. the hours of operation in non-emergency situations and used to supply power as part of a financial arrangement with another entity, in accordance with 40 CFR 60.4211(f)(3)(i), including the date, start time, and end time;
- j. identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine; and
- k. any deviation from the requirements to operate for the purpose of emergency demand response or as part of a financial arrangement with another entity, in accordance with 40 CFR 60.4211(f)(2)(ii) or (f)(3)(i).

The first annual report must cover the calendar year or part of the calendar year for which the engine started operations and must be submitted no later than March 31 of the following calendar year. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

In addition to submitting the annual report to the Northeast District office of the Ohio EPA, the annual report must also be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to this subpart is not available in CEDRI at the time that the report is due, the written report must be submitted to the Administrator at the appropriate address listed in 40 CFR 60.4.

f) **Testing Requirements**

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Opacity Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

b. Emission Limitation:

PM (PM₁₀ + PM_{2.5}) emissions shall not exceed 0.15 gram/bhp-hr (0.20 gram/KW-hr) (filterable).

Applicable Compliance Method:

Compliance with the emission limitation (0.15 gram PM (PM₁₀ + PM_{2.5})/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 4 of 40 CFR 60, Subpart IIII, for diesel engines for an engine of the same model year and maximum engine power.

If required, the permittee shall demonstrate compliance with the emission limitations through performance tests conducted in accordance with the provisions in term f)(2) below.

c. Emission Limitation:

NO_x + NMHC emissions shall not exceed 3.0 gram/bhp-hr (4.0 gram/KW-hr).

Applicable Compliance Method:

Compliance with the emission limitation (3.0 gram NO_x + NMHC/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 4 of 40 CFR 60, Subpart IIII, for diesel engines for an engine of the same model year and maximum engine power.

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

d. Emission Limitation:

CO emissions shall not exceed 2.6 grams/bhp-hr (3.5 grams CO/kW-hr).

Applicable Compliance Method:

Compliance with the emission limitation (2.6 gram CO/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 4 of 40 CFR 60, Subpart IIII, for diesel engines for an engine of the same model year and maximum engine power.

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

e. Sulfur Content Limitations for Diesel Fuel:

The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight.

Applicable Compliance Method:

Compliance shall be demonstrated through the record keeping requirements for the sulfur content of each shipment of diesel oil received. If meeting the standards in 40 CFR 80.510(c), this calculates to approximately 0.0015 lb SO₂/MMBtu.

f. Emission Limitation:

CO₂ emissions shall not exceed 521.6 grams/bhp-hr.

Applicable Compliance Method:

Compliance with the short-term emission limitation (521.6 grams/bhp-hr) shall be determined by the following equation:

$$E = A$$

where:

E = CO₂ emission rate, in grams of CO₂/bhp-hr;

A = emission factor, 521.6 grams of CO₂/bhp-hr (1.15 lb/hp-hr), AP-42 Section 3.3, Table 3.3-1, October 96.

- (2) If it is determined by the Ohio EPA that a compliance demonstration is required through performance testing, it shall be conducted using one of the following test methods or procedures:

- a. in accordance with 40 CFR 60.4212, conduct the exhaust emissions testing using the in-use testing procedures found in 40 CFR Part 1039, Subpart F, measuring the emissions of the regulated pollutants as specified in 40 CFR 1065.

g) Miscellaneous Requirements

- (1) None.

9. Emissions Unit Group - Emergency Generators: P005 and P006

EU ID	Operations, Property and/or Equipment Description
P005	3,131 HP, diesel-fired emergency generator
P006	3,131 HP, diesel-fired emergency generator

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only:

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rule 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 0.022 gram/bhp-hr (filterable).</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 0.50 gram/bhp-hr.</p> <p>Carbon monoxide (CO) emissions shall not exceed 2.6 gram/bhp-hr.</p> <p>Carbon dioxide (CO₂) emissions shall not exceed 526.6 gram/bhp-hr.</p>
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
c.	OAC rule 3745-31-05(F)	<p>The permittee shall install and operate a certified Tier IV engine.</p> <p>The exhaust emissions from this engine shall not exceed:</p> <p>0.022 gram PM/bhp-hr 0.50 gram NO_x/bhp-hr 0.14 gram VOC (NMHC)/bhp-hr 2.6 grams CO/bhp-hr</p> <p>Per 40 CFR 1039.105, Tier IV engines with PM emission standards at or below 0.05 gram/bhp-hr (0.07 g/kWh) are exempted from smoke emission standards.</p>
d.	40 CFR Part 60, Subpart IIII Tier II Standards	<p>The exhaust emissions from this engine shall not exceed:</p> <p>0.15 gram PM/bhp-hr 4.8 grams NO_x + NMHC/bhp-hr 2.6 grams CO/bhp-hr</p> <p>Smoke emission limitations:</p> <p>20% opacity during the acceleration mode</p> <p>15% opacity during the lugging mode</p> <p>50% opacity during the peaks in either the acceleration or lugging modes</p> <p>The emission limitations for PM and NO_x specified by this rule are less stringent than the emission limitations established under OAC rule 3745-31-05(F) and OAC rule 3745-31-10 through 20.</p> <p>The emission limitation for CO specified by this rule is equivalent to the emission limitation established under OAC rule 3745-31-05(F) and OAC rule 3745-31-10 through 20.</p> <p>The smoke emission limitations specified by this rule are identical to the smoke emission limitations specified in 40 CFR</p>

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		1039.105 for Tier IV engines. Tier IV engines are exempted from the smoke emission limitations when the particulate emission limitation is below 0.05 gram/bhp-hr (0.07 g/KWh) because an engine of such low PM level has inherently low smoke emission.
e.	40 CFR 60.4207(b) 40 CFR 80.510(b)	The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight. See terms b)(2)d, c)(2), d)(1), and e)(1)a.
f.	40 CFR Part 60, Subpart A (40 CFR 60.1 - 60.19)	Table 8 to Subpart IIII of 40 CFR Part 60 – Applicability of General Provisions to Subpart IIII shows which parts of the General Provisions in 40 CFR 60.1 - 60.19 apply.
g.	40 CFR Part 63, Subpart ZZZZ	A new area source operating in compliance with 40 CFR Part 60, Subpart IIII is the demonstration of compliance for 40 CFR Part 63, Subpart ZZZZ.
h.	OAC rule 3745-17-11(B)(5)(b)	Particulate emissions shall not exceed 0.062 lb/MMBtu of actual heat input. The emission limitation specified by this rule is less stringent than the emission limitation for PE pursuant to OAC rule 3745-31-05(F).
i.	OAC rule 3745-17-07(A)(1)	Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.
j.	OAC rule 3745-18-06(B)	Exemption due to having a maximum heat input less than 10 MMBtu/hr.
k.	OAC rule 3745-110-03(K)(16) and (K)(20)	Exempt. See b)(2)f.

(2) Additional Terms and Conditions

- a. The application and enforcement of the provisions of the New Source Performance Standards (NSPS), as promulgated by the United States Environmental Protection Agency (U.S. EPA), 40 CFR Part 60, are delegated to the Ohio Environmental Protection Agency (Ohio EPA).
- b. The emergency stationary compression ignition (CI) internal combustion engine (ICE) is subject to and shall be operated in compliance with the requirements of 40 CFR Part 60, Subpart IIII, the standards of performance for stationary CI ICE.
- c. The emergency stationary CI ICE has been or shall be purchased certified by the manufacturer to emission standards as stringent as those identified in 40 CFR 60.4202(b)(2) and found in Tier 2 of 40 CFR 89.112, Table 1, for engines greater than or equal to 750 horsepower (560 kilowatt) and certified to the opacity standards found in 40 CFR 89.113.
- d. The quality of the diesel fuel burned in this emissions unit shall meet the following specifications on an "as received" basis:
 - i. a sulfur content which is sufficient to comply with the allowable sulfur dioxide emission limitation of 0.0015 pound sulfur dioxide/MMBtu actual heat input; and 15 ppm sulfur or 0.0015% sulfur by weight; and
 - ii. a minimum cetane index of 40 or a maximum aromatic content of 35 volume percent.

Compliance with the above-mentioned specifications shall be determined by purchase orders specifying that each shipment of oil received is ULSD compliant.

- e. The emergency stationary ICE shall meet the following criteria, as applicable:
 - i. The stationary ICE shall be operated to provide electrical power or mechanical work during an emergency situation, to include power for critical networks or equipment at the facility when electric power from the local utility (or the normal power source, if the facility runs on its own power production) is interrupted, or where the stationary ICE is used to pump water for a fire or flood, etc.;
 - ii. The stationary ICE may be operated under limited circumstances for emergency demand response or periods where there is a deviation of voltage or frequency of 5% or more above the standard and as specified in 40 CFR 60.4211(f); and
 - iii. The stationary ICE may operate as part of a financial arrangement with another entity in situations as allowed in 40 CFR 60.4211(f)(2)(ii) or (iii) and 40 CFR 60.4211(f)(3)(i).

The emergency stationary ICE must comply with the applicable requirements specified in 40 CFR 60.4211(f) in order to be considered emergency stationary ICE under 40 CFR Part 60, Subpart IIII.

- f. The requirements of this rule do not apply since:
 - i. NO_x emissions are restricted to less than 25 tons per year; and
 - ii. the emissions unit is subject to a BACT limitation for NO_x.
- c) Operational Restrictions
 - (1) The emergency stationary CI ICE and any control device shall be installed, operated, and maintained according to the manufacturer's emission-related written instructions and the permittee shall only change those emission-related settings that are allowed by the manufacturer. The CI ICE must also be installed and operated to meet the applicable requirements from 40 CFR Part 89 and 40 CFR 1039, 'Control of Emissions from New and In-use Non-road CI ICE' and 40 CFR Part 1068, 'General Compliance Provisions for Highway, Stationary, and Nonroad Programs'. The permittee shall operate and maintain the stationary CI ICE to achieve the emission standards established in 40 CFR 60.4205 and the emission standards established in this permit over the entire life of the engine(s).
 - (2) Diesel fuel burned in the CI, ICE shall not exceed the limit for sulfur as specified by 40 CFR 80.510(b), i.e., the maximum sulfur content of diesel fuel shall not exceed 15 ppm or 0.0015% sulfur by weight.
 - (3) The permittee shall install a non-resettable hour meter prior to startup of the engine. Non-emergency situations, maintenance checks and readiness testing of the emergency ICE shall be limited to 100 hours per year; however, there is no time limit on operations during emergency situations. The permittee may petition the Director for approval of additional hours for maintenance checks and readiness testing. Any operation of the emergency ICE during anything other than emergency situations, non-emergency situations for 50 hours per year as described in c)(4) and maintenance or readiness testing is prohibited.
 - (4) The emergency stationary ICE must be operated according to the following requirements in order to be considered an emergency stationary ICE under 40 CFR Part 60, Subpart IIII, otherwise it shall meet all of the requirements for non-emergency engines.
 - a. The emergency stationary ICE may be used at the facility in emergency situations with no restriction on time.
 - b. The emergency stationary ICE may be operated for any combination of the following purposes for a maximum of 100 hours per calendar year:
 - i. The emergency stationary ICE may be used at the facility in non-emergency situations for 50 hours per year but cannot be used for peak shaving or non-emergency demand response, or to generate income for a facility to an electric grid or otherwise supply power as part of a financial agreement except where meeting all of the conditions identified in 40 CFR 60.4211(f)(3)(i).

- ii. The emergency stationary ICE may be operated for maintenance checks and readiness testing, provided that the tests are recommended by federal, state, or local government, the manufacturer, the vendor, the regional transmission organization or equivalent balancing authority and transmission operator, or the insurance company associated with the engine. Maintenance and testing of the emergency ICE may exceed 100 hours per calendar year, if the permittee maintains records indicating that federal, state, or local standards require the additional hours or the permittee may petition the Director for approval of additional hours for maintenance checks and readiness testing.
 - iii. The emergency stationary ICE may be operated for emergency demand response for periods during which the Reliability Coordinator under the North American Electric Reliability Corporation (NERC) Reliability Standard EOP-002-3, Capacity and Energy Emergencies (incorporated by reference, 40 CFR 60.17), or other authorized entity (as determined by the Reliability Coordinator), has declared an Energy Emergency Alert Level 2, as defined in the NERC Reliability Standard EOP-002-3.
 - iv. The emergency stationary ICE may be operated for periods where there is a deviation of voltage or frequency of 5% or greater below standard voltage or frequency.
- (5) In order to qualify for the emergency standards, the permittee shall only operate the emergency stationary RICE during emergencies, for maintenance and testing, for emergency demand response, for 50 hours per year for non-emergencies situations, and as allowed in 40 CFR 60.4211(f).
- d) **Monitoring and/or Recordkeeping Requirements**
 - (1) For each shipment of oil received for burning in this emissions unit, the permittee shall maintain records of each purchase order that identifies the total quantity of diesel oil received and a specification that each shipment of oil received is ULSD compliant. These records shall be retained for a minimum of 5 years and shall be available for inspection by the Director or his/her representative.
 - (2) The permittee shall maintain the manufacturer's certification, to the applicable Tier 2 emission standards in Table 1 of 40 CFR 89.112 or Tier emission standards equivalent or more stringent than emission standards in Table 1 of 40 CFR 89.112, on site or at a central location for all facility ICE and it shall be made available for review upon request. If the manufacturer's certification is not kept on site, the permittee shall maintain a log for the location of each ICE and it shall identify the agency-assigned emissions unit number, the manufacturer's identification number, and the identification number of the certificate. The manufacturer's operations manual and any written instructions or procedures developed by the permittee and approved by the manufacturer shall be maintained at the same location as the ICE.
 - (3) The permittee shall maintain records or a log for the operation of the engine in emergency and non-emergency service, as recorded through the non-resettable hour meter. The permittee shall keep the following information for the emergency CI stationary ICE:

- a. the number of hours the engine is in operation, recorded through the non-resettable hour meter;
 - b. the number of hours spent in emergency operation;
 - c. the number of hours spent in non-emergency operation;
 - d. the number of hours in maintenance checks and readiness testing; and
 - e. what classified the operation as an emergency.
- (4) If the engine is used for emergency response demand, for periods of deviation of voltage or frequency, or as part of a financial arrangement with another entity, as specified in 40 CFR 60.4211(f)(2)(ii) or (iii) or 40 CFR 60.4211(f)(3), the permittee must keep records of:
- a. the notification of the emergency situation;
 - b. the date(s) of each emergency situation; and
 - c. the start time and end time of engine operation for these purposes.
- e) Reporting Requirements
- (1) The permittee shall submit a quarterly deviation report identifying the following:
- a. any period of time (date and number of hours) that the quality of oil burned in this emissions unit did not meet the requirements established in 40 CFR 80.510(b), based upon the required fuel records; and the amount of non-compliant fuel burned on each such occasion; and
 - b. any exceedance of the annual 100-hour (or otherwise approved for additional hours) limitation on maintenance checks and readiness testing, as documented by the non-resettable hour meter and operations log.
- (2) The permittee shall submit an annual report, including the information identified in 40 CFR 60.4214(d) for each emergency stationary ICE that is employed for one of the following purposes:
- a. operates or is contractually obligated to have the engine(s) available for more than 15 hours per calendar year for emergency demand response or to supply power during periods where there is a deviation of voltage or frequency of 5% or more below the standard voltage or frequency; or
 - b. operates the engine(s) in non-emergency situations as identified in 40 CFR 60.4211(f)(3), including the supply of power as part of a financial agreement with another entity, where these conditions can be met.
- (3) The annual report required by 40 CFR 60.4214(d) must contain the following information:
- a. the company name and address where the engine is located;

- b. the date of the report and beginning and ending dates of the reporting period;
- c. the engine horse power and model year;
- d. the latitude and longitude of the engine in decimal degrees reported to the fifth decimal place;
- e. the number of hours of operation in emergency and non-emergency service, including the time of operations for maintenance checks and readiness testing, as recorded by the non-resettable hour meter;
- f. the hours of operation for the purposes of emergency demand response, including the date, start time, and end time;
- g. the hours of operation for the purposes of supplying power during periods where there was a deviation of voltage or frequency of 5% or greater below standard voltage or frequency, including the date, start time, and end time;
- h. the number of hours the engine is contractually obligated to be available for the purposes of emergency demand response or deviations from normal voltage or frequency, as specified in 40 CFR 60.4211(f)(2)(ii) and (iii);
- i. the hours of operation in non-emergency situations and used to supply power as part of a financial arrangement with another entity, in accordance with 40 CFR 60.4211(f)(3)(i), including the date, start time, and end time;
- j. identify the entity that dispatched the engine and the situation that necessitated the dispatch of the engine; and
- k. any deviation from the requirements to operate for the purpose of emergency demand response or as part of a financial arrangement with another entity, in accordance with 40 CFR 60.4211(f)(2)(ii) or (f)(3)(i).

The first annual report must cover the calendar year or part of the calendar year for which the engine started operations and must be submitted no later than March 31 of the following calendar year. Subsequent annual reports for each calendar year must be submitted no later than March 31 of the following calendar year.

In addition to submitting the annual report to the Northeast District office of the Ohio EPA, the annual report must also be submitted electronically using the subpart specific reporting form in the Compliance and Emissions Data Reporting Interface (CEDRI) that is accessed through EPA's Central Data Exchange (CDX) (www.epa.gov/cdx). However, if the reporting form specific to this subpart is not available in CEDRI at the time that the report is due, the written report must be submitted to the Administrator at the appropriate address listed in 40 CFR 60.4.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Opacity Limitation:

Visible particulate emissions from any stack serving this emissions unit shall not exceed twenty (20) percent opacity as a 6-minute average, except as provided by the rule.

Applicable Compliance Method:

If required, compliance with the stack visible particulate emission limitation shall be demonstrated through visible particulate emission observations performed in accordance with the methods and procedures specified in 40 CFR Part 60, Appendix A, Method 9.

b. Emission Limitations:

PM (PM₁₀ + PM_{2.5}) emissions shall not exceed 0.022 gram/bhp-hr (0.03 gram/KW-hr) (filterable).

Applicable Compliance Methods:

Compliance with the emission limitation (0.022 gram PM (PM₁₀ + PM_{2.5})/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than 750 horsepower (560 kilowatts), application – generator sets.

If required, the permittee shall demonstrate compliance with the emission limitations through performance tests conducted in accordance with the provisions in term f)(2) below.

c. Emission Limitations:

NO_x emissions shall not exceed 0.50 gram/bhp-hr (0.67 gram/KW-hr).

Applicable Compliance Method:

Compliance with the emission limitation (0.50 gram NO_x/bhp-hr) shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than 750 horsepower (560 kilowatts), application – generator sets.

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

d. Emission Limitation:

VOC (NMHC) emissions shall not exceed 0.14 gram/bhp-hr (0.19 gram/KW-hr).

Applicable Compliance Method:

Compliance with the emission limitation shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than 750 horsepower (560 kilowatts), application – generator sets.

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

e. Emission Limitation:

CO emissions shall not exceed 2.6 grams/bhp-hr (3.5 grams CO/kW-hr).

Applicable Compliance Method:

Compliance with the emission limitation shall be based on the manufacturer's certification and by maintaining the engine according to the manufacturer's specifications. The gram/bhp-hr limit is the emission limitation from Table 1 of 40 CFR 1039.101, the Tier 4 exhaust emission standards for diesel engines greater than 750 horsepower (560 kilowatts), application – generator sets.

If required, the permittee shall demonstrate compliance with the emission limitation through performance tests conducted in accordance with the provisions in term f)(2) below.

f. Sulfur Content Limitations for Diesel Fuel:

The sulfur content of the diesel fuel burned in this emissions unit shall not exceed 15 ppm or 0.0015% sulfur by weight.

Applicable Compliance Method:

Compliance shall be demonstrated through the record keeping requirements for the sulfur content of each shipment of diesel oil received. If meeting the standards in 40 CFR 80.510(b), this calculates to approximately 0.0015 lb SO₂/MMBtu.

g. Emission Limitation:

CO₂ emissions shall not exceed 526.6 grams/bhp-hr.

Applicable Compliance Method:

Compliance with the short-term emission limitation (526.6 grams/bhp-hr) shall be determined by the following equation:

$$E = A$$

where:

E = CO₂ emission rate, in grams of CO₂/bhp-hr;

A = emission factor, 526.6 grams of CO₂/bhp-hr (1.16 lb/hp-hr), AP-42 Section 3.4, Table 3.4-1, October 96.

- (2) If it is determined by the Ohio EPA that a compliance demonstration is required through performance testing, it shall be conducted using one of the following test methods or procedures:
 - a. in accordance with 40 CFR 60.4212, conduct the exhaust emissions testing using the in-use testing procedures found in 40 CFR Part 1039, Subpart F, measuring the emissions of the regulated pollutants as specified in 40 CFR 1065.
- g) Miscellaneous Requirements
 - (1) None.

10. Emissions Unit Group - Ladle Preheaters: P002, P003 and P004

EU ID	Operations, Property and/or Equipment Description
P002	15.00 MMBtu/hr, natural gas-fired ladle dryer / preheater, vented to the EAF baghouse.
P003	15.00 MMBtu/hr, natural gas-fired ladle dryer / preheater, vented to the EAF baghouse.
P004	15.00 MMBtu/hr, natural gas-fired ladle dryer / preheater, vented to the EAF baghouse.

- a) The following emissions unit terms and conditions are federally enforceable with the exception of those listed below which are enforceable under state law only:

(1) None.

- b) Applicable Emissions Limitations and/or Control Requirements

- (1) The specific operation(s), property, and/or equipment that constitute each emissions unit along with the applicable rules and/or requirements and with the applicable emissions limitations and/or control measures are identified below. Emissions from each unit shall not exceed the listed limitations, and the listed control measures shall be specified in narrative form following the table.

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
a.	OAC rules 3745-31-10 through 20 (Prevention of Significant Deterioration of Air Quality)	<p>Particulate matter emissions less than or equal to 10 microns in aerodynamic diameter (PM₁₀) and particulate matter emissions less than or equal to 2.5 microns in aerodynamic diameter (PM_{2.5}) shall not exceed 1.1E-1 lb/hr (filterable and condensable) and 4.9E-1 ton per rolling, 12-month period.</p> <p>Nitrogen oxides (NO_x) emissions shall not exceed 2.12 lbs/hr and 9.29 tons per rolling, 12-month period.</p> <p>Source design characteristic: The burner is designed to meet 1.41E-01 lb of NO_x/MMBtu.</p> <p>Carbon monoxide (CO) emissions shall not exceed 5.2E-1 lb/hr and 2.26 tons per rolling, 12-month period.</p> <p>Source design characteristic: The burner is designed to meet 3.44E-02 lb of CO/MMBtu.</p>

	Applicable Rules/Requirements	Applicable Emissions Limitations/Control Measures
		Carbon dioxide equivalent (CO ₂ e) emissions shall not exceed 1,764.7 lbs/hr and 7,729 tons per rolling, 12-month period.
b.	OAC rule 3745-31-05(A)(3)(a)(ii)	The Best Available Technology (BAT) requirements under OAC rule 3745-31-05(A)(3) do not apply to the PM ₁₀ , PM _{2.5} , NO _x , CO, sulfur dioxide (SO ₂) and volatile organic compounds (VOC) emissions from this air contaminant source since the uncontrolled potential to emit is less than 10 tons per year.
c.	OAC rule 3745-17-11	See b)(2)b.
d.	OAC rule 3745-17-07(A)(1)	See b)(2)c.
e.	OAC rule 3745-18-06(A)	See b)(2)d.

(2) Additional Terms and Conditions

- a. The emissions from this emissions unit shall be vented to the EAF baghouse at all times the emissions unit is in operation.
- b. The uncontrolled mass rate of particulate emissions from this emissions unit is less than 10 pounds per hour. Therefore, pursuant to OAC rule 3745-17-11(A)(2)(a)(ii), Figure II of OAC rule 3745-17-11 does not apply. In addition, Table I of OAC rule 3745-17-11 does not apply because the process weight, as defined in OAC rule 3745-17-01(B)(22), is equal to zero.
- c. This emissions unit is exempt from the visible particulate emission limitations specified in OAC rule 3745-17-07(A), pursuant to OAC rule 3745-17-07(A)(3)(h), because the emissions unit is not subject to the requirements of OAC rule 3745-17-11.
- d. This emissions unit is exempt from the sulfur dioxide emissions limitation specified in OAC rule 3745-18-06(E), pursuant to OAC rule 3745-18-06(C) because the process weight input is less than one thousand pounds per hour.

c) Operational Restrictions

- (1) The permittee shall burn only natural gas in this emissions unit.

d) Monitoring and/or Recordkeeping Requirements

- (1) For each day during which the permittee burns a fuel other than natural gas, the permittee shall maintain a record of the type and quantity of fuel burned in this emissions unit.

e) Reporting Requirements

- (1) The permittee shall submit deviation (excursion) reports that identify each day when a fuel other than natural gas was burned in this emissions unit. Each report shall be submitted within 30 days after the deviation occurs.

f) Testing Requirements

- (1) Compliance with the Emissions Limitations and/or Control Requirements specified in section b) of these terms and conditions shall be determined in accordance with the following methods:

a. Emission Limitation:

PM₁₀ and PM_{2.5} emissions shall not exceed 1.1E-1 lb/hr (filterable and condensable) and 4.9E-1 ton per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A * B$$

where:

E = PM₁₀/PM_{2.5} emission rate, in lbs/hr;

A = emission factor, 7.45E-03 lb of PE/PM₁₀/MMBtu, AP-42 Section 1.4, July 98 (filterable and condensable); and

B = 15.00 MMBtu/hr, heat input.

Compliance with the annual PM₁₀/PM_{2.5} emission limitation (4.9E-1 ton per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 1.1E-1 lb/hr by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

If required, the permittee shall demonstrate compliance with this PM₁₀/PM_{2.5} emission limitation through emission tests performed in accordance with the procedures specified in 40 CFR Part 51, Appendix M, Methods 201 or 201A and 202.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

b. Emission Limitation:

NO_x emissions shall not exceed 2.12 lbs/hr and 9.29 tons per rolling, 12-month period.

Source design characteristic:

The burner is designed to meet 1.41E-01 lb of NO_x/MMBtu.

The source design characteristic was established based on the information provided by the permittee in permit application #A0064851.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A * B$$

where:

E = NO_x emission rate, in lbs/hr;

A = emission factor, 1.41E-01 lb of NO_x/MMBtu - burner manufacturer; and

B = 15.00 MMBtu/hr, heat input.

Compliance with the annual NO_x emission limitation (9.29 tons per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 2.12 lbs/hr by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

If required, the permittee shall demonstrate compliance with this emission limitation through emission tests performed in accordance with 40 CFR Part 60, Appendix A, Method 7 or 7E.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

c. Emission Limitation:

CO emissions shall not exceed 5.2E-1 lb/hr and 2.26 tons per rolling, 12-month period.

Source design characteristic:

The burner is designed to meet 3.44E-02 lb of CO/MMBtu.

The source design characteristic was established based on the information provided by the permittee in permit application #A0064851.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B$$

where:

E = CO emission rate, in lbs/hr;
A = emission factor, 3.44E-02 lb of CO/MMBtu - burner manufacturer; and
B = 15.00 MMBtu/hr, heat input.

Compliance with the annual CO emission limitation (2.26 tons per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 5.2E-1 lb/hr by the maximum number of hours in a 12-month, rolling period (8,760 hrs/year) and then dividing by 2,000 lbs/ton. Therefore, if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

If required, the permittee shall demonstrate compliance with this emission limitation through emission tests performed in accordance with 40 CFR Part 60, Appendix A, Method 10.

Alternative U.S. EPA-approved test methods may be used with prior approval from the Ohio EPA.

d. Emission Limitation:

CO_{2e} emissions shall not exceed 1,764.7 lbs/hr and 7,729 tons per rolling, 12-month period.

Applicable Compliance Method:

Compliance with the hourly emission limitation shall be determined by the following equation:

$$E = A \cdot B$$

where:

E = CO_{2e} emission rate, in lbs/hr;
A = emission factor, 1.176E+02 lbs of CO_{2e}/MMBtu, AP-42 Section 1.4, July 98;
and
B = 15.00 MMBtu/hr, heat input.

Compliance with the annual CO_{2e} emission limitation (7,729 tons per rolling, 12-month period) shall be determined by multiplying the maximum hourly allowable emission limitation of 1,764.7 lbs/hr by the maximum number of hours in a 12-month, rolling period (8,760 hr/year) and then dividing by 2,000 lbs/ton. Therefore,

if compliance is demonstrated with the hourly emission limitation, then the permittee will be in compliance with the annual emission limitation.

g) Miscellaneous Requirements

- (1) None.
